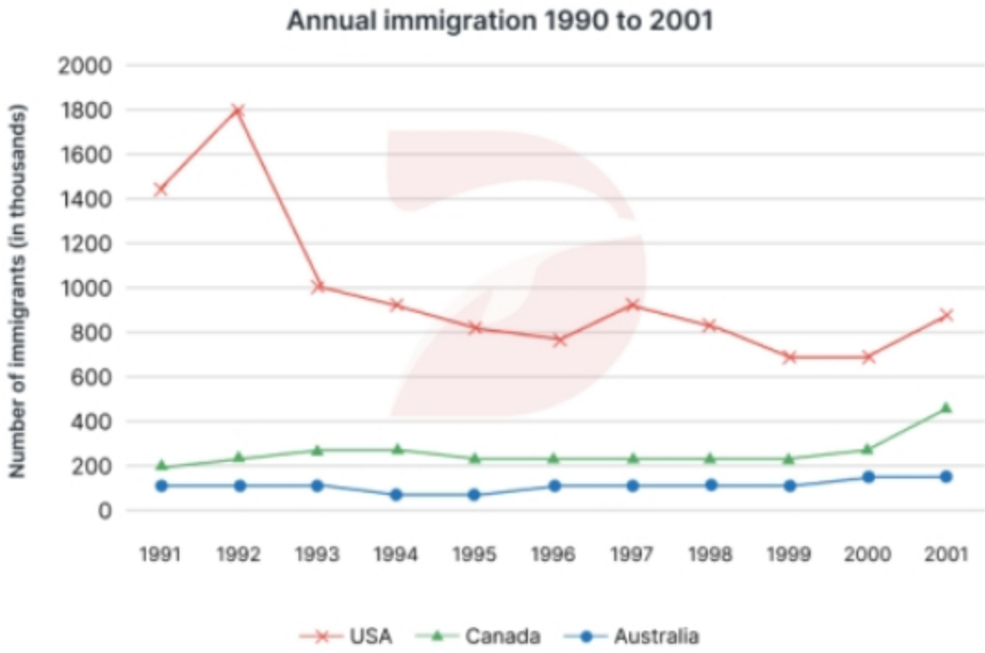
FORECAST WRITING QUÝ 3/2026 BY PHAT DUONG

Bộ tài liệu Forecast Quý 3/2026 độc quyền by Phát Dương đang được hoàn thiện và dự kiến sẽ đầy đủ các đề đầu quý vào tháng 9 (đủ đề + sample cho đầu quý). Các bạn lưu ý theo dõi để cập nhật đề nhé!

Task 1: The graph below shows the number of immigrants to three countries from 1990 to 2001.



Sample: The given line graph compares the USA, Canada, and Australia in terms of annual immigration numbers between 1990 and 2001.

Overall, the chart shows that the USA experienced a sharp decline in annual immigration, while Canada saw an increase. Meanwhile, Australia's immigration figures remained relatively stable. Despite significant decreases, the USA consistently had the highest number of immigrants.

In 1991, nearly 1500 thousand people immigrated to the USA, the highest figure among the three countries. This was followed by Canada, with around 200 thousand immigrants, double that of Australia.

Over the next five years, annual immigration to the USA dropped sharply to about 800 thousand, then fluctuated slightly between 1996 and 2001, finishing the period at around 900 thousand immigrants, still ranking first. In contrast, immigration to Canada and Australia remained relatively stable throughout the entire given period, at around 200 thousand and 100 thousand people, respectively. By the final year, however, Canada experienced a sharp increase, reaching 400 thousand immigrants.

Task 2: In some countries, students pay their own college or university fees while in others, the government pays for them. Do you think the advantages that the government pays the money outweigh the disadvantages?

Sample: There is no doubt that education has positive benefits for society; therefore, some governments subsidize college tuition. In my opinion, free university education brings both advantages and disadvantages, and the decision of whether tertiary education should be free should be based on the country's resources.

On the one hand, college education subsidies promote equality of opportunity, which means less privileged young citizens would have the same access to higher education as ones from better-endowed families. This would lead to a more educated and productive workforce since countries with high rates of education generally have higher levels of innovation and productivity growth. This would also provide more skilled graduates for the current increasingly high-tech industries whose positions require employees of specialized knowledge and skill sets. Besides, graduates can also gain skills and awareness of civic institutions which offer intangible benefits to society.

LELO FORECAST
BY PHAT DUONG

On the other hand, there has been a rapid rise in the number of graduates, and many of those take jobs that do not require a degree; therefore, it would be a waste to continue to fund public university education when there are shortages in resources for core generic skills training, such as literacy and numeracy, and more basic vocational training so people could become social care givers, builders or electricians. Moreover, when people have to pay to go to university, they tend to value their education more and take their studying more seriously, and schools should have more resources to maintain standards and quality of teaching and research.

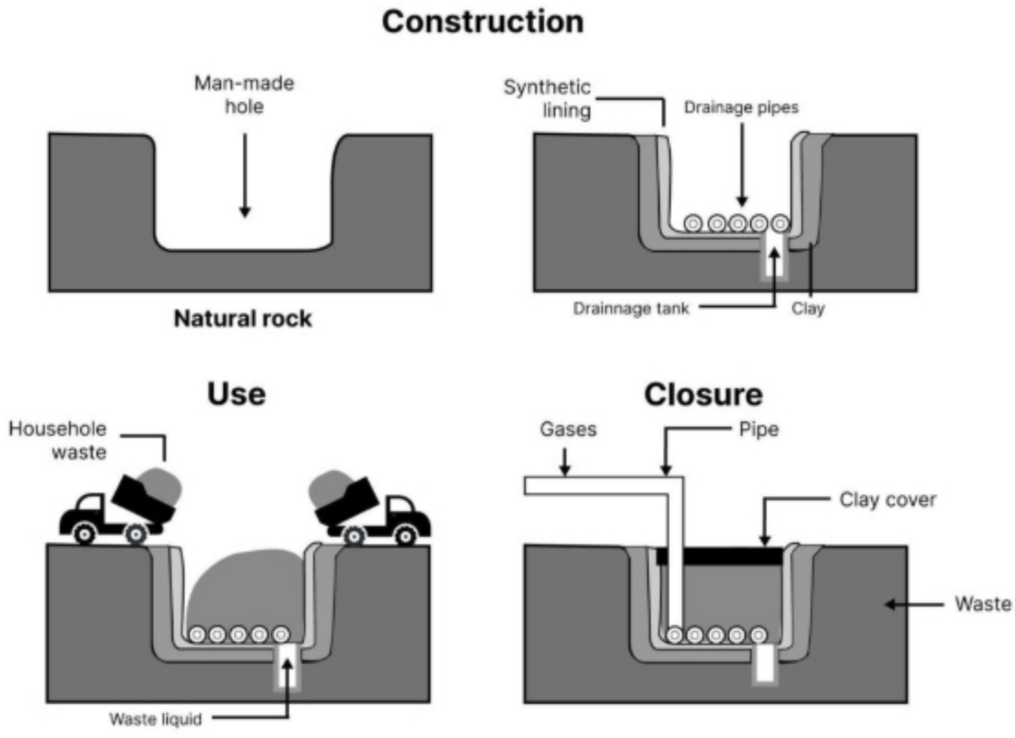
In conclusion, both charging and subsidizing college tuition bring benefits, and governments should consider their resources and labor demands when making decisions on such matters.

Task 1: The process shows the design of a modern landfill for household waste.



Sample: The diagrams illustrate the process involved in constructing a modern landfill designed for household waste management. Overall, the process encompasses three primary stages including construction, waste deposition, and waste management with several key components, including a pit, drainage pipes, and a tank.

In the initial construction stage, a large, deep rectangular pit is excavated in natural rock. This pit is first lined with a thick layer of clay, followed by a synthetic liner to prevent leakage. At the bottom of the pit, a drainage tank is installed, while several drainage pipes are positioned on top of the liner. These components are crucial for the subsequent management of liquid waste.

Once the landfill is prepared, it is filled with household waste. As waste accumulates, excess liquid drains through the pipes into the tank at the base, preventing contamination of the surrounding soil.

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Mọi tài liệu được share dưới dạng PDF hoặc từ tài khoản khác sẽ không đủ đề và không chịu sự kiểm soát từ thầy.

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

In the final stage, gas generated from the decomposing waste is collected via a gas vent, which is connected to the drainage pipes. This gas is then safely emitted and can be utilized domestically. In order to effectively contain the waste and minimize environmental impact, the landfill is sealed with another layer of clay. This comprehensive setup ensures efficient waste management by preventing leakage, managing waste liquids, and safely utilizing generated gases.

Task 2: Some people think the main benefit of international cooperation is in the protection of the environment, while others think that the main benefits are in world business. Discuss both views and give your opinion.

Sample: The trend of international cooperation has opened up a host of opportunities for developments. While some argue that these advantages are mostly in environmental protection, others claim that businesses will benefit most. From my perspective, both sides are correct, as international cooperation can simultaneously do good to the two mentioned sectors.

On the one hand, joint efforts from all nations can have positive effects on the environment. First, as many environmental crimes are operated cross-border, governments must collaborate to detect and deplete these activities. By way of illustration, illegal logging in Southeast Asia spans across the lands of Brunei, Laos, Indonesia, et cetera. Each country accounts for a part in the illegal wood supply chain. Therefore, Southeast Asian nations should cooperate to destroy the illegal timber production line, as a country's lone effort would only result in the contemporary eradication of a mere portion of the chain. Secondly, international cooperation allows countries to learn from each other and create optimal solutions to similar problems. Nations with matching backgrounds can use each other's campaigns as case studies and apply accordingly to their respective countries, resulting in better effectiveness.

On the other hand, the world economy will gain considerable advantages through multinational cooperation. Thanks to globalization, many businesses are having subsidiaries worldwide, creating numerous job opportunities for the locals. For example, various underdeveloped areas are receiving a boost in economic growth due to international companies constructing their off-shore headquarters there. Hai Phong in Vietnam, where Samsung built their subsidiary office, is an exemplary example as the province has welcomed an increasing number of laborers.

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

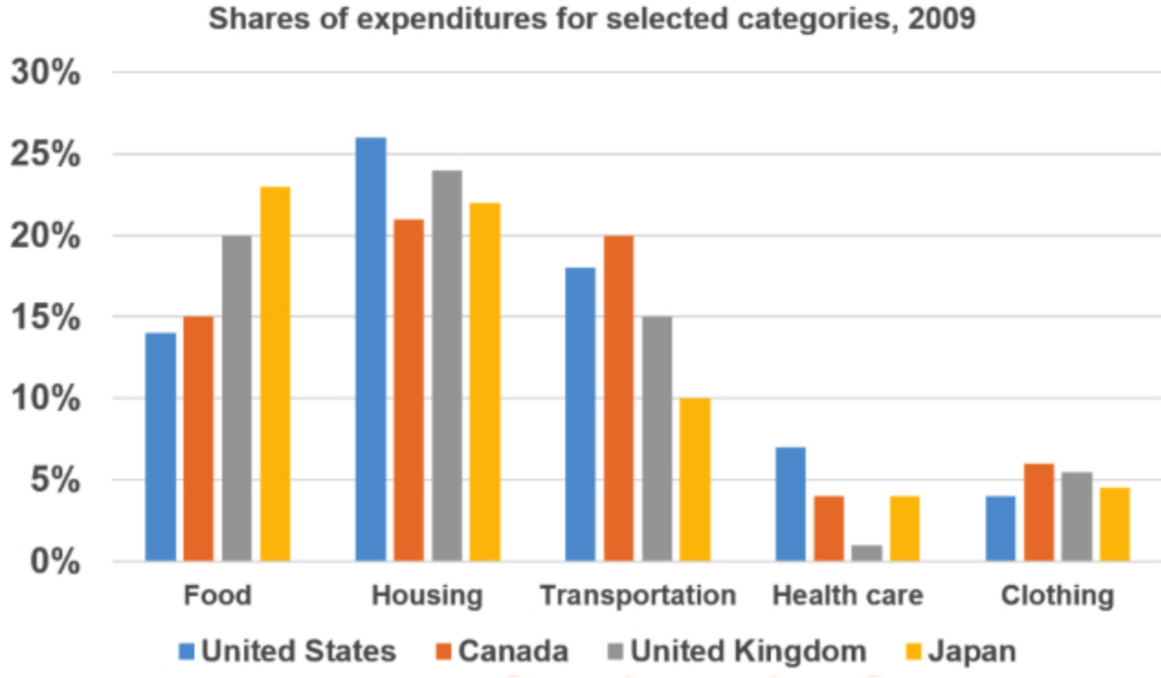
Additionally, multinational conglomerates can enjoy attractive economic incentives from foreign nations, thus helping them save additional costs on tax and more. In Vietnam, Lego enjoyed feed-in tariffs, tax exemptions, and investment subsidies for building their first carbon neutral plant in the country.

In conclusion, international cooperation is a positive trend for both the economy and the environment and therefore, should be encouraged.

Task 1: The bar chart below shows the share of expenditures for five major categories in the United States, Canada, the United Kingdom, and Japan in the year 2009.



Sample: The bar chart gives information on the proportions of five countries' expenses in five categories in 2009.

Overall, all countries spent more on food, housing, and transportation than on health care and clothing.

Americans spent the most on housing, accounting for nearly a quarter of their expenses, and in other countries, housing still remained the most expensive category, with over 20% of total expenditures. However, in terms of food, Japan was the leading country and allocated over 20%

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Mọi tài liệu được share dưới dạng PDF hoặc từ tài khoản khác sẽ không đủ đề và không chịu sự kiểm soát từ thầy.

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

of their expenditures to this sector, followed by the United Kingdom, at 20%. In addition, around 15% of American and Canadian expenditures were spent on this category.

Canadians spent the most on transportation, comprising 20% of total spendings, while the figure of Japanese expenditure was the lowest, at 10%. About 18% of American expenses went to this sector, about 3% higher than the proportion of British spendings. Considering health care, Americans spent about 7% of their budget, while other nations all allocated less than 5%. Likewise, expenses for clothing were low in all countries, at about 5%.

Task 2: Throughout history, people have dreamed of living in a perfect society, but they have not agreed on what an ideal society would be like. What do you think is the most important element of a perfect society in the modern world? How can people work towards achieving an ideal society?

Sample: Throughout the centuries, humanity has aspired to build a utopia — a society free from conflict, inequality, and injustice. While many elements contribute to an ideal society, I firmly believe that justice is the cornerstone that holds everything else together. Without it, even the most advanced societies are bound to collapse under the weight of division and distrust.

Justice provides a foundation of fairness where all individuals, regardless of their background, are treated equally under the law. This principle curbs the abuse of power and ensures that everyone's rights are protected. When people feel that they are fairly treated, they are more likely to trust institutions, cooperate with one another, and contribute positively to the community. For example, Nordic countries such as Sweden and Norway, which boast transparent legal systems and low corruption rates, consistently rank among the happiest and most harmonious societies in the world.

To bring about such a just and ideal society, systemic reforms are essential. First, governments must establish impartial legal frameworks that prioritize equality and accountability. Corrupt practices and favoritism should be eliminated through regular audits and public oversight. Furthermore, civic education plays a crucial role in shaping responsible citizens who understand their rights and duties. From a young age, individuals should be taught the importance of fairness, social responsibility, and respect for the rule of law.

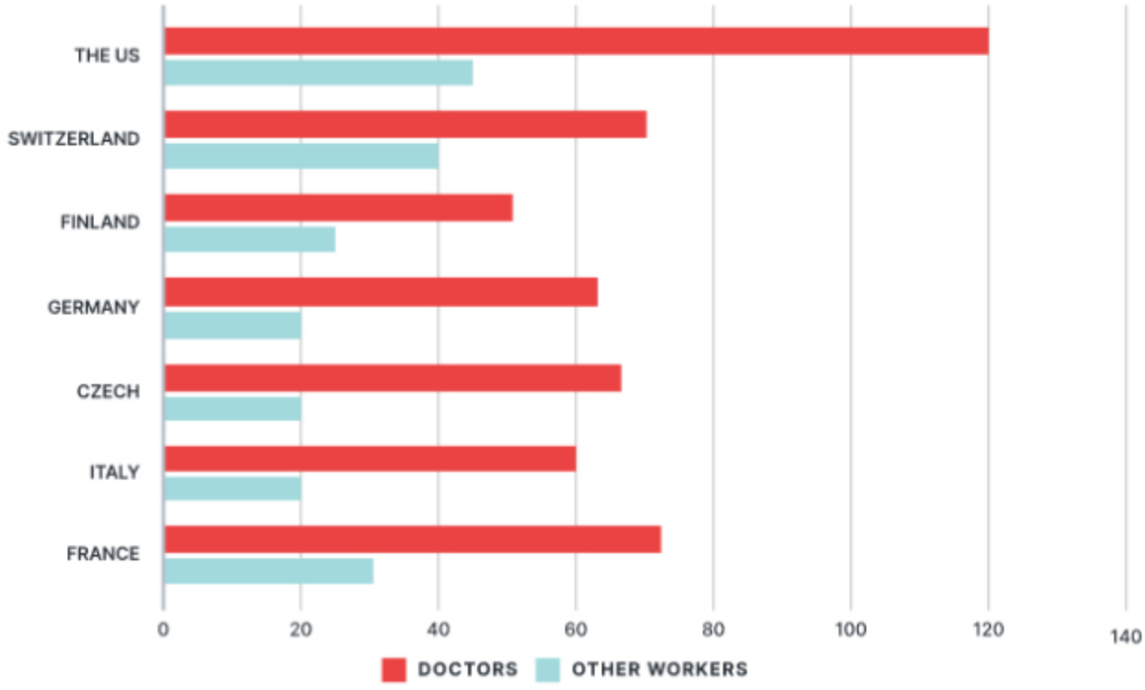
In conclusion, although many aspects contribute to an ideal society, justice stands out as the most pivotal. Only by nurturing a culture rooted in fairness and lawful conduct can we transform our dream of a perfect society into a living reality.

Task 1: The chart below shows the annual pay (thousands of US dollars) for doctors and other workers in seven countries in 2004.



Sample: The chart demonstrates the yearly pay for doctors and other workers in seven different nations in 2004 in thousands of USD.

LET'S FORECAST
BY PHAT DUONG

Overall, it is immediately obvious that doctors make more than any other professions in these countries. Furthermore, the average salary for American workers, both for doctors and other professions, outstrips every other country.

With regards to doctors' pay, the US ranks first at an average of 120000 USD, being significantly higher than the countries in joint second place of Switzerland and France, where doctors earn around 70 000 USD. Conversely, doctors in Finland earn the least at only 50 000 USD annually, 10 000 lower than the second lowest pay for doctors, that of Italy, at 60 000 USD.

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

As for the salary for other professions, it is again highest in the US, where average pay is around 45 000 USD. Meanwhile, Switzerland ranks second at 40 000 USD, while France is third at 30 000 USD. Germany, the Czech Republic and Italy all share the bottom position, paying their non-doctors a measly 20 000 USD on average.

Task 2: Some people think it is more important to spend money on roads and motorways than on public transport systems such as railways and trams. To what extent do you agree or disagree?

Sample: Investment in infrastructure is crucial for any country's development. While some argue that funding for roads and motorways should take priority over public transportation systems, I believe that prioritizing public transport is more beneficial in the long term for both urban areas and the environment.

On the one hand, there are clear advantages to investing in roads and motorways. Improved roads can lead to smoother and faster transportation of goods, which is essential for economic growth. Additionally, good road infrastructure allows private vehicles to travel more efficiently, reducing travel time and making transportation easier, especially for those who live in rural areas. In these regions, well-maintained roads and highways are crucial for connecting people to urban centers where they can access healthcare, education, and employment opportunities.

On the other hand, investment in public transportation offers even greater benefits, especially in terms of sustainability. By prioritizing public transport, cities can effectively reduce traffic congestion and lower carbon emissions, addressing environmental concerns. Public transportation is also more affordable and accessible to a broader demographic, providing a reliable alternative to private vehicles. For instance, major cities like Tokyo and London have established extensive public transport networks that have successfully decreased the need for personal cars, thereby easing road congestion and improving air quality.

In conclusion, although investing in roads and motorways brings certain benefits, I am convinced that greater focus on public transport development is more advantageous. A robust public transportation system not only improves mobility for all citizens but also contributes to a cleaner, more sustainable urban environment.

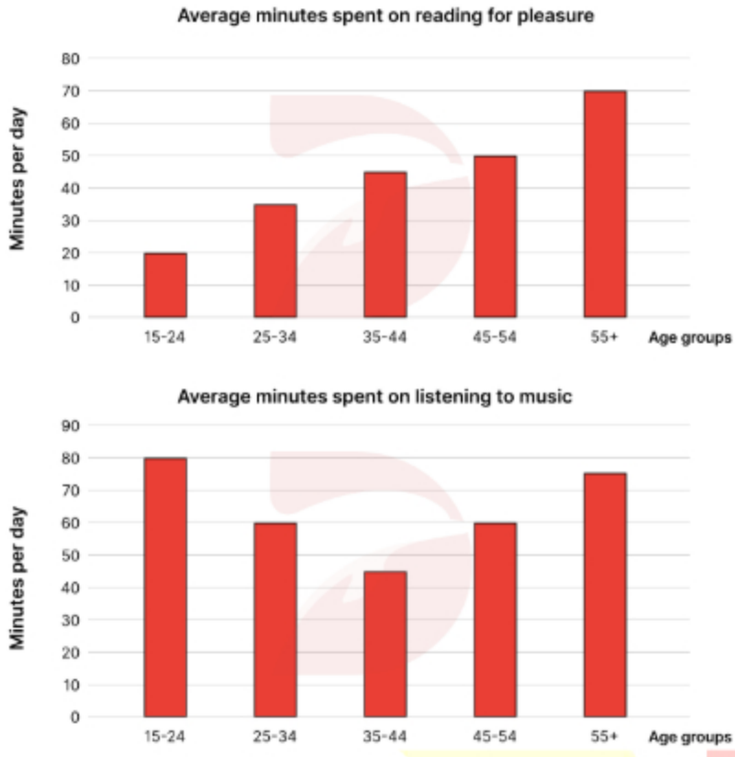
Task 1: The graphs illustrate the average amount of time per day spent on popular leisure activities for different age groups in New Zealand.



Sample: The given bar charts illustrate the average daily time spent on two leisure activities—reading and listening to music—by people in five different age groups in New Zealand.

Overall, reading for leisure is the most popular activity among those aged over 55, while the youngest age group, 15-24, spent the least time on this pastime. As for listening to music, this pastime is most popular among those aged 15-24 and over 55, while the 35-44 age group allocated the lowest amount of time to this activity.

In terms of leisure reading, people aged over 55 spent around 70 minutes on average, the highest among all age groups surveyed. This was followed by the 45-54 and 35-44 age groups, with respective figures being approximately 50 and 45 minutes. Individuals aged 25-34 spent around 35 minutes reading, which is almost double the amount spent by those in the 15-24 age group.

Regarding listening to music, young adults aged 15-24 allocated 80 minutes of their daily free time to this activity, just 5 minutes more than those aged over 55. The 25-34 and 45-54 age

groups both spent 60 minutes on average. Meanwhile, people aged 35-44 spent the least time listening to music, with only 45 minutes per day.

Task 2: In some countries, young people have become richer, healthier, and live longer, but they are less happy. What are the causes? What can be done to address this situation?

Sample: Despite unprecedented advancements in wealth, health, and longevity for young people in many nations, there is a troubling and paradoxical trend of declining happiness. This essay argues that young people's discontent mainly arises from societal pressures and digital isolation, which can be alleviated through improved work-life balance and stronger community engagement.

Several factors are contributing to this significant decline in happiness among younger generations, even amidst material prosperity. First, the modern professional landscape is intensely competitive, placing extraordinarily high performance expectations on young people, which often leads to chronic stress and burnout. Consequently, the excessive workload and relentless pressure to succeed can result in mental and emotional exhaustion, which directly reduces overall life satisfaction. This can be exacerbated by an overreliance on technology and social media. The reason is that constant exposure to idealized and curated online images fosters unrealistic self-comparisons, and as a result, many individuals develop profound feelings of inadequacy and social isolation. For instance, young adults who spend significant hours on social platforms frequently report lower self-esteem and heightened levels of anxiety.

To address this worrying trend, several effective measures must be implemented. A primary strategy involves promoting a healthier work-life balance and expanding access to mental health support. Specifically, if governments and employers provided more flexible work schedules and readily available counseling programs, it would significantly reduce stress and improve emotional resilience. As a result, better mental health care would empower individuals to maintain motivation and find fulfillment in both their personal and professional lives. Moreover, it is crucial to encourage offline social interaction and community engagement. This is because active participation in team sports, local volunteering, or cultural activities strengthens real-life connections, which directly counters the loneliness stemming from digital overuse. For example,

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

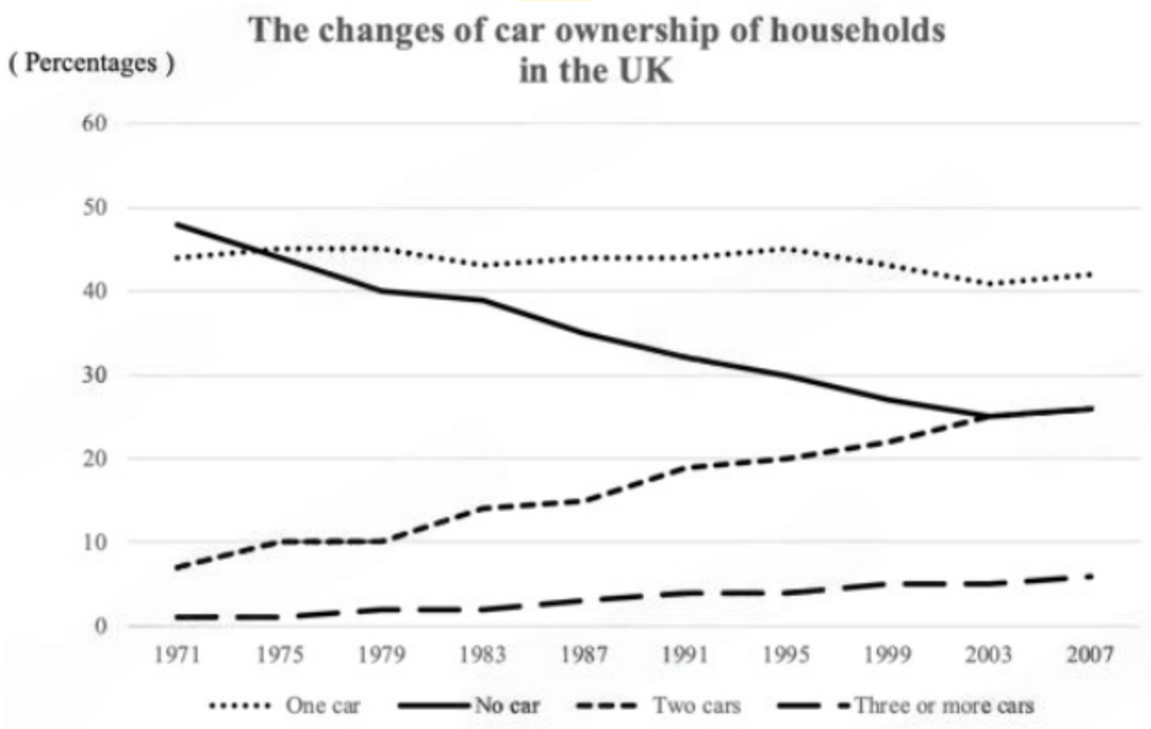
Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

youth community projects and local volunteering events foster a sense of shared purpose and face-to-face collaboration, ultimately cultivating a vital sense of belonging and collective happiness.

In conclusion, while modern youth enjoy superior material and physical well-being, their happiness is often undermined by immense societal pressures and the isolating nature of the digital world. The most viable solution, therefore, lies in a concerted effort to prioritize mental health, reform workplace expectations, and actively rebuild a strong sense of real-world community.

Task 1: The graph below gives information about car ownership in Britain from 1971 to 2007.



Sample: The given graph illustrates data on the proportion of British households owning cars from 1971 to 2007.

Overall, it can be seen that the percentage of one-car owners remained almost the same throughout the period. In addition, there were more and more people owning 2 cars and 3+ cars, thereby reducing the proportion of households having no car in the same time frame.

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Mọi tài liệu được share dưới dạng PDF hoặc từ tài khoản khác sẽ không đủ đề và không chịu sự kiểm soát từ thầy.

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

In 1971, roughly half of British households had no car to use, which was nearly 5 times more than the percentage of people who owned two cars. Noticeably, there was almost no family in this country possessing three or more cars in the same year.

Throughout the period, the proportion of two-car-owners and 3-plus-car-owners experienced an increase to 27% and 7%, respectively. Despite a slight fluctuation, the figure for British households possessing one car stayed unchanged (44%) during the time frame. Consequently, a significant drop of 25% in the percentage of families owning no car was recorded at the end of the period.

Task 2: These days, more fathers stay at home and take care of their children while mothers go out to work. What could be the reasons for this? Is it a positive or negative development?

Sample: In the modern era, more women are taking the role of the breadwinner of the family, whereas men become househusbands and care for the children. From my point of view, this brings positive implications to society. This essay shall provide potential reasons and justifications for the positive stance on this issue.

To begin with, more mothers taking the financial responsibilities implies a less prejudiced society, in which men and women receive equal opportunity. Modern society has allowed people to view one's true potential via their true abilities, not through gender, race, or other aspects that can invite discrimination. As a result, fathers becoming caretakers and tackling familial duties can be viewed as reasonable. For example, in European countries, the role of househusbands is being encouraged, as women are striving to advance their professional careers, with a goal to increase employment and fertility rates. In a more liberal and globalized world, it is considered fair if women tackle similar financial responsibilities, or hold career-oriented beliefs, while maintaining love for their family.

Another justification for the positive perspective towards fathers taking familial responsibilities is that it helps men become more sympathetic towards perceived family and women issues. Fathers who are away from home due to work often miss out on the important issues their children might face such as experiencing puberty or teenage love. They can learn how to

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

navigate delicate situations, and emerge into a more caring individual. Additionally, this provides men an opportunity to understand women's issues. The perceptions of women's role and duties in the family have been prejudiced and condescending. With more fathers staying at home and caring for their families, these prejudices can be opposed and reduced to an outdated view from the previous era.

In conclusion, exchanging the roles of women and men in a familial context provides opportunities for both sexes to understand different gender roles and familial responsibilities, as well as representing gender equality and liberal beliefs in the modern era. It is hopeful that in the future, no one can be judged for their gender identity, or their roles in a family and society.

Task 1: The maps below show a beachfront area in Australia in 1950 and today.

Sample: The diagrams compare the changes to the layout of a seaside area in Australia between 1950 and now.

Overall, the area has undergone a significant transformation, marked by the addition of new commercial and recreational facilities along with the extension of the previous road system.

In 1950, the area could be accessed by a road that ran from the city, located towards the north of the map and leading directly to a car park. There were a number of basic amenities directly adjacent to the road, including a playground, outdoor dining tables and a pavilion. Two 25m

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

pools could be found along the shoreline, one to the west across from the playground while the other was beside the lighthouse at the eastern end of the beach.

At present, this coastal location is significantly more developed. Most notably, the existing road has been lengthened eastwards all the way towards the lighthouse, improving accessibility for visitors. A new car park was erected, which replaced the former playground. In contrast, the dining area and pavilion are left intact. To the west of the area, there is now a large restaurant and a surf club, overlooking a newly installed 50m pool instead of the original 25m one. Meanwhile, the pool near the lighthouse has remained unchanged, although an additional surf club is now situated next to it.

Task 2: In some countries, parents are choosing to teach their children themselves at home instead of sending them to school. Do the advantages of homeschooling outweigh the disadvantages?

Sample: In recent years, homeschooling has gained popularity in many countries. While it offers certain advantages, this essay contends that the disadvantages significantly overshadow the benefits.

On the one hand, homeschooling does provide certain advantages. Chief among these is that parents have greater control over their children's learning experience. Homeschooling allows for a more tailored approach, as parents can closely monitor their children's progress, identify specific strengths and weaknesses, and adjust the curriculum accordingly. This approach can be particularly advantageous for children with special learning needs, allowing them to learn at their own pace. For example, those who struggle with attention deficits or other cognitive challenges can learn at home without the pressure of keeping up with a classroom setting. Meanwhile, some gifted students may be able to delve deeper into subjects they are passionate about when being homeschooled, whereas in a conventional school, the pace might be too slow for them.

However, despite these advantages, homeschooling comes with several significant disadvantages that can hinder a child's overall development. The most critical issue is the lack of social interaction. Homeschooled children miss out on the daily interactions with peers that are essential for developing communication and teamwork skills. In contrast, traditional schools

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

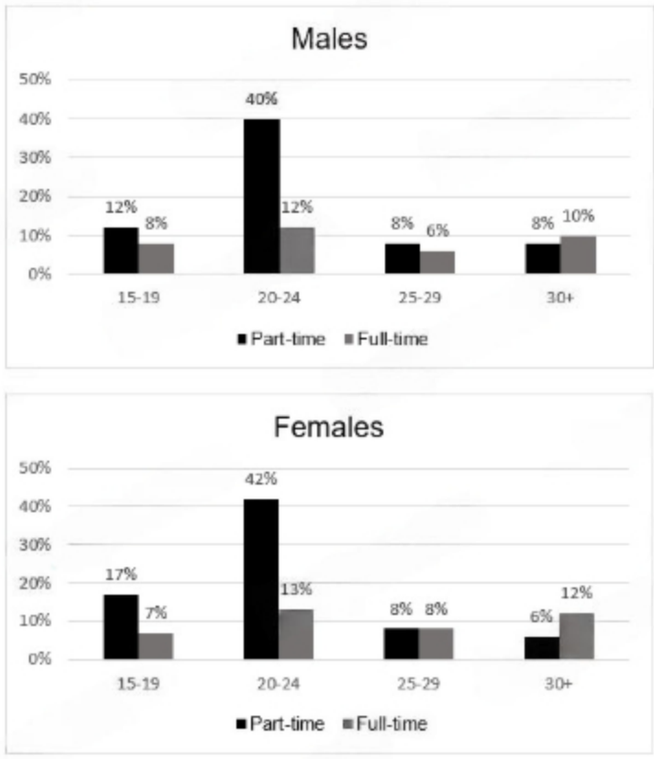
Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

provide opportunities for children to engage in group activities and extracurriculars, which help develop these crucial life skills. Another problem worth mentioning is that not all parents have the pedagogical expertise to teach complex subjects effectively. Qualified teachers in schools, on the other hand, are trained to explain concepts in an engaging and accessible way, which many parents, despite their best intentions, may struggle to replicate.

In conclusion, it is evident that homeschooling offers certain benefits, such as personalized learning and flexibility. However, I believe that the disadvantages it presents are far more significant because of the lack of social interaction and the potential limitations in the quality of education provided at home. Ultimately, the structured, social environment and professional teaching offered in traditional schools make them a more suitable option for most children.

Task 1: The charts below show the percentage of male and female students of different age groups who studied in Australia for full-time and part-time education in 2006.



Sample: The bar charts illustrate the proportions of male and female students enrolled in part-time and full-time education in Australia across different age groups in 2006.

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

Overall, for both genders, students preferred part-time education significantly more than full-time in most age groups, with the highest enrollment rates recorded in the 20-24 age category.

Among male students, part-time education consistently attracted more students across almost all age groups. Notably, males aged 20-24 represented the largest group, with 40% choosing part-time study compared to just 12% for full-time—a substantial gap of 28%. In contrast, the smallest discrepancy occurred in the 25-29 age group, where the percentages were almost identical (8% part-time and 6% full-time). Meanwhile, the 15-19 age group (12% part-time, 8% full-time) and those aged 30 and above (8% part-time, 10% full-time) exhibited the narrowest gap of 2%, reversing the general pattern.

A similar trend is observable among female students, with part-time study dominating in all but the oldest age bracket. The 20-24 age group had the highest enrollment overall, with a significant gap of 29% (42% part-time versus 13% full-time). A significantly lower proportion appeared equally in the 25-29 age group, with both part-time and full-time standing at 8%. Additionally, notable differences were evident in the 15-19 category, where the gap between part-time (17%) and full-time (7%) education reached 10%, whereas a smaller gap (6%) occurred among females aged 30 and older (6% part-time, 12% full-time).

Task 2: Some people believe that young people who commit serious crimes should be punished in the same way as adults. Do you agree or disagree?

Sample: In contemporary societies, there is a debate over whether adolescents who commit grave offences should receive the same punitive measures as adults. While it is understandable that equal sentencing can seem just and bolster deterrence, I firmly believe that young offenders' neurological immaturity and potential for rehabilitation justify a differentiated approach.

On the one hand, imposing adult-equivalent sanctions on juveniles can convey a message of retributive parity and societal condemnation. When the harm inflicted by a serious crime—such as homicide—matches that committed by an adult, many argue that the penalty should likewise be commensurate to satisfy society's demand for fairness. Moreover, uniform sentences may strengthen deterrence: the knowledge that juveniles face severe repercussions identical to those

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

for adults could dissuade impulsive acts and reduce crime rates. For victims' families, too, seeing youthful perpetrators held fully accountable can provide a sense of closure and reinforce faith in the justice system.

Nonetheless, young people's distinct developmental stage warrants a more nuanced response. Neurologically, the prefrontal cortex—responsible for impulse control and foresight—continues maturing well into the mid-twenties, rendering adolescents more prone to spur-of-the-moment decisions. Consequently, punishment that emphasizes rehabilitation over retribution—such as tailored counseling and educational interventions—has been shown to lower re-offending rates by addressing underlying behavioural issues. Furthermore, youths possess a higher capacity for societal reintegration. This means that programs that focus on vocational training and therapy not only equip them with skills but also foster pro-social attitudes, transforming former offenders into productive citizens rather than perpetuating cycles of crime. Therefore, adopting a rehabilitative framework for young offenders not only aligns with their developmental realities but also yields lasting benefits for public safety by fostering genuine behavioural change and reducing recidivism.

In conclusion, although equal sentences may appear fair and deterrent at first glance, I maintain that the unique developmental needs and rehabilitation potential of young people make a differentiated, reformative justice system both more humane and more effective.

Task 1: The charts below show the percentage of food and goods bought from supermarkets in European countries in 1998 and 2008.

Sample: The given bar charts compare three European countries in terms of the percentage of food and other products purchased from supermarkets between 1998 and 2008.

Overall, supermarket sales experienced a marked upward trend in all countries, irrespective of the type of products. It is also evident that while the proportion of both food and goods purchased in supermarkets in Country 2 was the highest in 1998, by 2008 it had been overtaken by Country 1.

Regarding food sales, in 1998, individuals in Country 2, on average, bought approximately 23% of their food from supermarkets, after which this figure increased modestly by 5% over the following decade. A similar trend, though more pronounced, was observed in Country 1, where supermarket food sales surged from 10% to 35%, surpassing Country B. Meanwhile, food purchases in Country 3 remained relatively low, accounting for less than 10% in both years, despite a slight increase.

A comparable pattern emerged in the sale of goods. Country 2 initially led in 1998, with nearly 25% of goods purchased from supermarkets, quintupling the figure for Country 1. However, by 2008, Country 1 saw an eightfold increase, reaching nearly 40%, thus surpassing the more

modest rise to around 27% in Country 2. Country 3 consistently registered the lowest proportion of goods bought in supermarkets, with figures increasing from just over 2% to nearly 15%.

Task 2: The availability of entertainment such as video games on handheld devices is harmful to individuals and to the society they live in. To what extent do you agree and disagree?

Sample: The ubiquity of entertainment on handheld devices, particularly video games, has sparked a contentious debate regarding their impact on modern life. I completely agree with the view that easy access to these digital distractions is detrimental to both the individual and the broader community, as it undermines healthy lifestyles, mental well-being, and essential communication skills.

Primarily, the constant availability of mobile entertainment frequently disrupts an individual's daily routine and productivity. Many users find themselves engrossed in virtual worlds late into the night, a habit that severely compromises sleep patterns and, consequently, academic or professional performance. For instance, excessive gaming often leads to a sedentary lifestyle and a lack of focus on long-term goals. Over time, this imbalance can trigger mental health struggles, including heightened anxiety, stress, and even aggression. Furthermore, such unhealthy behaviors can have a ripple effect on society, as the desensitization to violence in certain games may, in extreme cases, contribute to rising levels of aggression within communities.

Secondly, the reliance on handheld devices has led to a noticeable erosion of social interaction. As children and young adults become accustomed to seeking solitary gratification through their screens, they often lose interest in traditional, face-to-face play. This preference for virtual competition over real-world engagement creates a generation that is increasingly socially isolated. Even during family or friendly gatherings, the presence of smartphones often results in "phubbing," where close relationships begin to fade as individuals remain physically present but mentally distant. While some argue that these platforms offer opportunities for creativity and global perspectives, the reality is that without strict self-regulation, these benefits are overshadowed by the neglect of real-world duties and social obligations.

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

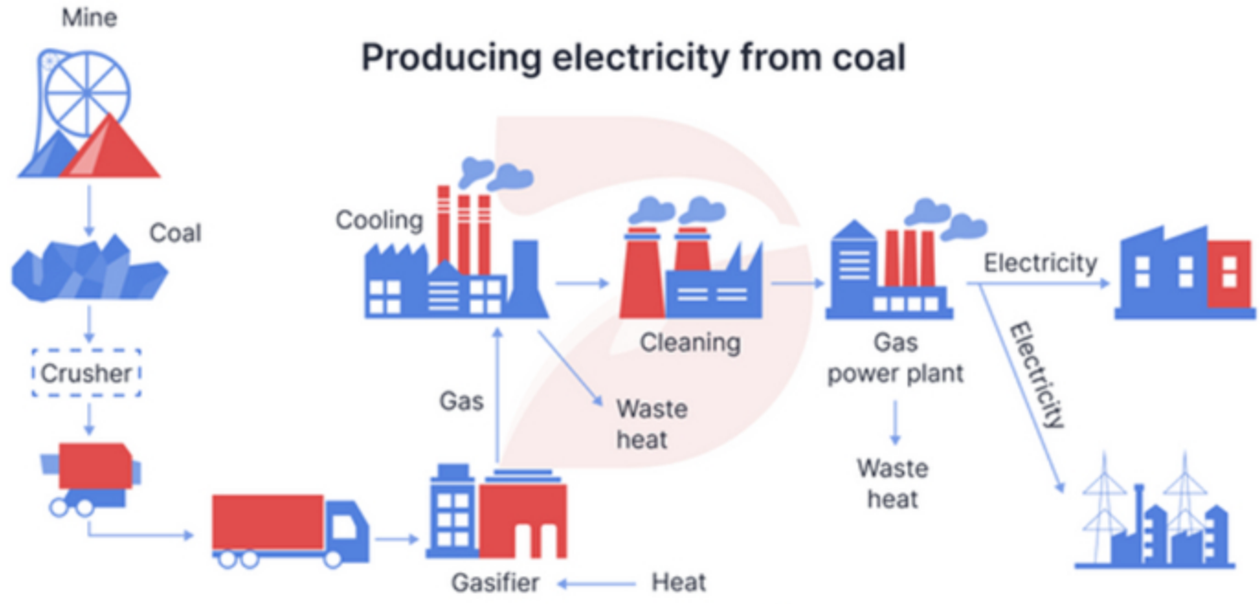
In conclusion, I firmly believe that unrestricted access to electronic entertainment exerts a negative influence on both personal and social spheres. By altering life plans and weakening interpersonal bonds, these devices can profoundly diminish a person's quality of life. Therefore, the use of virtual programs must be moderated to ensure that technology serves as a tool for progress rather than a barrier to social cohesion.

Task 1: The diagram below shows how one type of coal is used to produce electricity.



Sample: The provided diagram illustrates how electricity is generated from coal.

Overall, the process includes several key stages, beginning with coal mining and culminating in power delivery to households and industries, with waste heat being a by-product at various stages.

The first step involves coal being mined at extraction plants. The mined coal subsequently undergoes crushing, breaking it down into finer pieces. These crushed coal fragments are then transported to a gasifier, inside which combustion occurs at elevated temperatures in order to convert the coal into gas.

After this phase is complete, the produced gas proceeds to a separate facility for cooling, with excess heat released as waste. Once cooled, the gas undergoes a cleaning stage whereby any impurities are removed. The purified gas then becomes the input for a gas power plant. Within

the power plant, electricity is generated and distributed for domestic and industrial use. It is worth noting that even at this final stage, additional waste heat is still discharged as a by-product.

Task 2: Doctors recommend that older people exercise regularly. However, many older people do not exercise enough. What could be the reason for this? What can be done to encourage them to do physical activities?

Sample: The medical community consistently advocates for regular physical activity among the elderly, yet a significant proportion of this demographic fails to meet the recommended exercise levels. This reluctance is primarily rooted in physical insecurities and environmental barriers, but it can be effectively addressed through several possible measures.

There are several underlying factors that explain why older individuals frequently avoid regular physical exertion. Primarily, age-related physical decline often breeds a profound fear of injury or the exacerbation of existing health conditions. Specifically, concerns regarding chronic pain, potential falls, or cardiovascular strain can lead to a psychological barrier; as a result, many seniors opt for an increasingly sedentary lifestyle to avoid perceived harm. Another factor worth mentioning is a lack of motivation, often compounded by unsuitable living environments. For example, elderly individuals residing in isolated areas or neighborhoods without accessible parks and fitness facilities may find it difficult to initiate a routine. Consequently, the combination of limited social support and inaccessible infrastructure significantly reduces the drive to participate in physical activities.

To mitigate these challenges, several practical measures can be implemented to foster a more active lifestyle among seniors. Crucially, the organization of community-based exercise programs can provide the necessary structure and social stimulation required for consistency. By offering group classes tailored specifically for seniors, such as local walking clubs or senior yoga sessions, local authorities can create a supportive environment that builds confidence. Moreover, raising awareness through professional medical guidance is essential in debunking misconceptions regarding the risks of movement. This is because when older adults are educated about safe, age-appropriate exercises, their anxiety regarding injury diminishes. When medical

advice is coupled with clear instructions, it leads to increased confidence and a much higher willingness to engage in daily physical activity.

In conclusion, while health-related fears and environmental obstacles often deter the elderly from exercising, society can effectively encourage older populations to embrace a more active and healthy lifestyle by fostering community engagement and providing expert health education.

Task 1: The table below gives information about the average annual distance travelled by adults and the types of travel in 1977 and 2007.

Average annual distance (in miles) travelled by adults, by mode of travel

	1997	2007
Walking	400	300
Bicycle	100	80
Car	3500	7100
Motorcycle	100	90
Bus	800	500
Train	900	1000
Taxi	200	800

Sample: The given table compares different means of transportation in terms of the annual distance traveled by adults in two separate years, 1977 and 2007. Units are measured in miles.

Overall, cars were by far the most popular method of transport during the entire 40-year period, witnessing the most dramatic rise. In contrast, bicycles and motorcycles were the least common modes of transportation. Regarding changes in commuting patterns, there was an upward trend in the use of cars, trains, and taxis, while the remaining methods of transport recorded a decline.

In 1977, cars occupied the position as the most prevalent vehicle, with 3,500 miles traveled, nearly quadruple the distance of the second and third most popular methods, buses and trains, which ranged from 800 to 900 miles. Meanwhile, the distance traveled on foot was 400 miles on average, twice as high as that of taxis. Bicycles were as common as motorbikes, with the average distance for each vehicle standing at 100 miles.

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

By 2007, the distance traveled by car had increased twofold to 7,100 miles, solidifying its position as the most preferred mode of transportation. Similar changes were seen in the figures for trains and taxis, with the former witnessing a slight growth to 1,000 miles and the latter recording a fourfold rise to 800 miles. In contrast, the other transport methods underwent a descending trend, with the most dramatic drop recorded in buses, falling by 300 miles to reach 500 miles in 2007. The distances traveled by walking, motorbikes, and bicycles dropped to 300, 90, and 80 miles, respectively.

Task 2: More and more universities are replacing face-to-face teaching with online courses. Do you think this is a positive or negative development?

Sample: The escalating trend of universities supplanting traditional face-to-face instruction with online courses presents a significant shift in higher education. While this development poses potential challenges, I believe it is ultimately a positive one due to its profound benefits in accessibility and flexibility.

On the one hand, the increasing shift towards online courses brings several drawbacks. A primary concern is the potential decline in academic engagement and personal discipline. Specifically, the lack of a physical classroom setting can lead to weaker motivation and substantially less interaction with both instructors and peers. This reduced accountability often results in lower participation rates and, consequently, an overall decline in learning outcomes. Furthermore, this educational model limits the development of crucial soft skills. When students rely solely on digital platforms, they have fewer opportunities to practice real-time communication and teamwork. As a result, the reduction in spontaneous group discussions and in-person collaboration can hinder the development of social competence and vital employability skills.

Conversely, online learning offers more notable advantages, particularly in enhancing accessibility and flexibility for students. Digital platforms effectively remove geographical and, to some extent, financial barriers, which allows learners from remote or disadvantaged backgrounds to pursue degrees they otherwise could not. For example, established Open University programs enable working adults and students in rural areas to undertake tertiary study

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

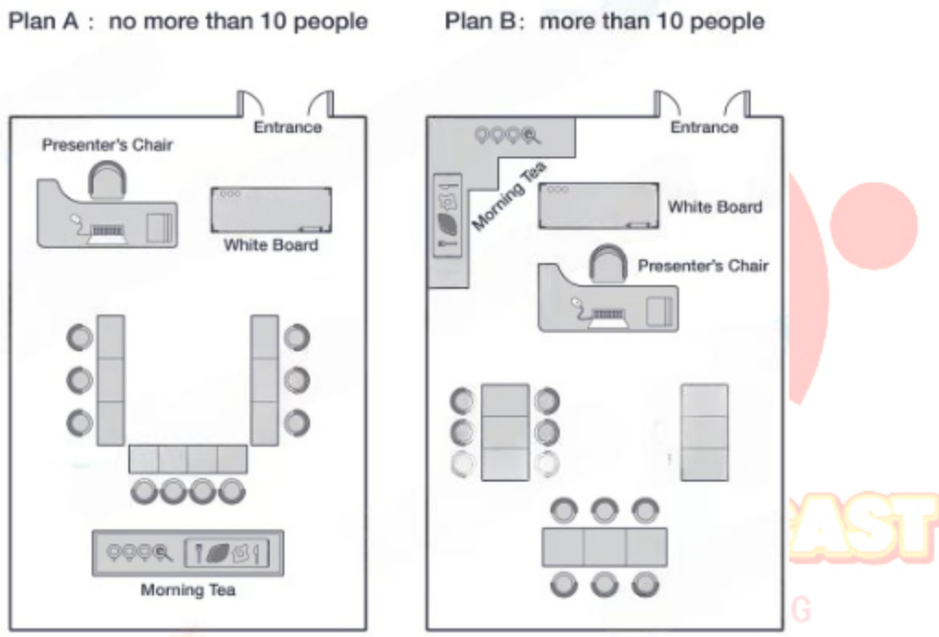
Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

without the need to relocate or resign from their jobs. Moreover, this model provides greater flexibility for diverse learners. The availability of recorded lectures and self-paced materials means students can manage their time around work or family commitments. This flexible scheduling not only promotes lifelong learning but also facilitates a healthier balance between academic study and personal responsibilities.

In conclusion, while the potential for reduced academic engagement and interpersonal skill development must be acknowledged, I maintain that this trend is predominantly positive due to its convenience, flexibility, and extended reach of online education.

Task 1: The plans show the room layouts for training sessions for up to ten people and more than ten people.



Sample: The two floor plans illustrate the room arrangements designed for training sessions with no more than ten participants and with more than ten participants.

Overall, the major differences between the two layouts lie in the seating arrangements, the placement of the presenter's chair and whiteboard, and the location of the morning tea area. Plan A is structured for a more compact, interactive session, while Plan B accommodates a larger group with more dispersed seating and rearranged facilities.

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

In Plan A, the seating is organized in a U-shape with chairs on three sides, allowing all participants to face the presenter directly. The presenter's chair is positioned at the front of the room, to the left of the whiteboard, and the morning tea area is located at the rear. This setup promotes interaction and ensures that everyone has a clear view of the whiteboard.

By contrast, Plan B modifies the room to suit a bigger audience. Two rectangular tables are used, each surrounded by chairs on all sides. The presenter's chair and whiteboard have been repositioned to the bottom of the room, creating a different focal point. Notably, the morning tea area has been moved closer to the entrance and is now set along the top wall, possibly to accommodate the larger number of attendees and improve flow within the room.

Task 2: Some children nowadays take sports seriously while others play sports in their free time. Is this a positive or negative development?

Sample: The contemporary landscape of youth athletics is characterized by a notable divergence, with some young individuals pursuing sports with professional intensity while others engage in them merely for leisure. I contend that this dual approach is overwhelmingly positive, as it caters to different developmental needs.

Engaging in sports with serious intent affords children long-term developmental advantages that transcend mere recreation. The rigorous demands of structured training and high-stakes competition inherently teach young athletes to navigate adversity and establish realistic objectives. Consequently, the resilience cultivated on the field or court often translates directly into an enhanced capacity to manage academic pressures and personal setbacks effectively. Moreover, intensive practice initiated at a young age facilitates profound skill mastery and accrues vital competitive experience. This trajectory can unlock significant opportunities, such as university scholarships or pathways to professional careers. Specifically, for children demonstrating exceptional talent, this early specialization often yields substantial long-term rewards.

Meanwhile, children who participate in sports casually accrue benefits that, while less structured, are of equal importance to their development. The first reason for this is that the primary motivation of playing for enjoyment fosters a positive, intrinsic association with physical

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

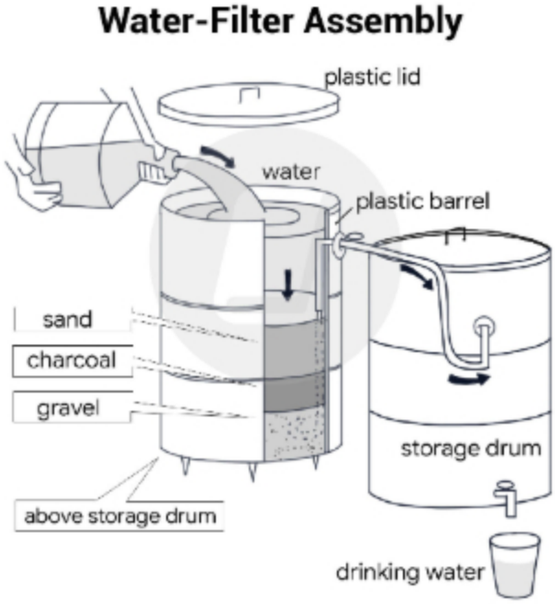
Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

activity, which significantly reduces the risk of burnout common in high-pressure environments. As a result, when activity is linked to pleasure rather than obligation, children are demonstrably more likely to maintain these healthy habits throughout their lives. Informal games with peers also serve as a crucial venue for honing communication and teamwork skills without the anxiety of high-stakes performance. For instance, children gathering for spontaneous weekend football in a local park are not only exercising but are also developing vital social bonds and emotional resilience.

In conclusion, I firmly believe that the current duality in youth sports, accommodating both intense dedication and relaxed recreation, represents a highly beneficial development, offering tailored pathways for children to cultivate either elite discipline or foundational well-being.

Task 1: The diagram below shows how a simple water filter is constructed and how it functions to produce clean drinking water.



Sample: The provided diagram illustrates the straightforward process by which water is filtered. Overall, the process employs uncomplicated equipment and relies on the natural properties of different materials to remove impurities from water.

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Mọi tài liệu được share dưới dạng PDF hoặc từ tài khoản khác sẽ không đủ đề và không chịu sự kiểm soát từ thầy.

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

Regarding the equipment and ingredients, the key components necessary for this method are a sizable container and three essential ingredients namely sand, charcoal, and gravel. These elements are arranged in layers, designed to progressively remove contaminants. Specifically, the bottom layer is gravel, on top of which is a layer of clean sand and then another layer of crushed charcoal.

The process begins when untreated water is poured into the container and undergoes a filtering phase. During this stage, water passes through the layers, with larger debris being trapped in the gravel, followed by smaller particles being trapped in the sand, and some contaminants being absorbed by the charcoal.

After successfully passing through all three layers, the water emerges filtered and purified, now ready for drinking. Subsequently, a pipe is affixed to the container so as to transfer the filtered water into a separate storage tank, where it remains available for utilization whenever required.

Task 2: Some people think that governments should ban dangerous sports, while others think people should have freedom to do any sports or activity. Discuss both views and give your own opinion.

Sample: Whether people should be able to freely choose the sports or activities they want to partake in has become a topic of discussion. While some people argue that dangerous sports should be restricted, I firmly believe that the decision should lie with the players.

On the one hand, it is true that dangerous sports can come with several risks to the participants. Players always face life-threatening perils once they decide to take part in extreme sports, especially those that involve highly specialized gears, namely skydiving, motor-racing, or mountain climbing. However experienced the participants are, though rare, chances are that the required equipment can malfunction, thus causing the participants fatal wounds or even deaths. For instance, in May, 2021, a first-time skydiver and his experienced instructor were hospitalized due to parachute malfunctions in McLaren Vale, Australia.

On the other hand, I firmly advocate for the idea that players should have the autonomy to partake in any sport. To start with, one's well-being is first and foremost within their individual liberties, therefore, banning a person from chasing their passion is unreasonable, especially when

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

they have fully acknowledged the threats that come with it. For adrenaline junkies, extreme sports give them pleasure. Preventing them from sports such as skydiving or snowboarding equals taking away their source of happiness. Moreover, in reality, the preparation for these dangerous sports is always painstaking in order to reduce the chance of mortality. For example, one would need to pass a skydiving certification course if they wish to skydive solo.

In conclusion, while extreme sports are dangerous in some ways, I am of the opinion that they can be beneficial to the players' mental well-being and thus should not be prohibited.

Task 1: The charts below show the average age men and women retired in seven countries in 2004 and 2008.

Sample: The bar charts compare the average retirement age of men and women in seven countries in 2004 and 2008.

Overall, most countries experienced a slight increase in the retirement age for both genders during the period. Men generally retired at older ages than women, and Sweden had the highest retirement ages, while France recorded the lowest for both years.

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Mọi tài liệu được share dưới dạng PDF hoặc từ tài khoản khác sẽ không đủ đề và không chịu sự kiểm soát từ thầy.

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

Among men, the retirement age rose in all countries except Italy, where it remained stable at 60. In Denmark, the figure increased from 62 to 62.5 years. Germany saw a more notable rise, from 61 to 62. In the Netherlands, Sweden, and the UK, the age edged up slightly from around 62.8–63.2 to 63–63.5 years by 2008. France had the lowest male retirement age, increasing marginally from 58.8 to 59 years.

For women, a similar upward trend was observed in most nations, though France and Italy showed slight declines. In Denmark, the average retirement age rose from 60 to 60.5, while Germany, the UK, and the Netherlands also saw increases of approximately 0.5 years. Sweden had the highest figures for both years, rising from 63.0 to 63.5 years. In contrast, Italy and France saw small decreases, falling to 59.5 and 58.8 respectively in 2008.

Task 2: Some people believe that women should play an equal role as men in a country's police force or military force, while others think women are not suitable for these kinds of jobs. Discuss both views and give your opinion.

Sample: There has been an ongoing debate regarding whether women should have equal participation in the police and security forces or if these professions are inherently unsuitable for them. While some argue that women bring valuable skills such as intelligence, strategy, and empathy, others believe that the physical demands and potential impact on unit cohesion make these roles less appropriate for female recruits. This essay will examine both perspectives before presenting my own view.

On the one hand, proponents of gender equality in security forces argue that women possess the same intellectual capabilities as men and can contribute significantly to these sectors. Modern warfare and law enforcement increasingly rely on intelligence, strategy, and technological proficiency rather than sheer physical strength. Women have already demonstrated excellence in leadership roles, negotiation, and crisis management, which are crucial aspects of military and policing responsibilities. Furthermore, having female officers in these forces enhances diversity and inclusivity, leading to a more versatile approach to law enforcement and national security. For instance, female officers are often better equipped to handle cases involving domestic abuse and sexual violence, which require empathy and sensitivity that male officers may lack.

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Mọi tài liệu được share dưới dạng PDF hoặc từ tài khoản khác sẽ không đủ đề và không chịu sự kiểm soát từ thầy.

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

On the other hand, critics argue that the physical requirements of military and police work pose significant challenges for women. Combat roles, for example, demand high levels of endurance, strength, and resilience, which men generally possess in greater measure due to biological differences. Despite rigorous training, women may face difficulties in performing tasks such as carrying heavy equipment, engaging in hand-to-hand combat, or enduring extreme conditions in battlefield scenarios. Additionally, differences in physical capabilities and concerns over safety may lead to preferential treatment, which could impact unit cohesion and operational efficiency of military and police units. For example, in physically demanding tasks or dangerous situations, commanders might assign less strenuous duties to female personnel, not out of necessity but out of caution. This could create resentment among male colleagues and disrupt teamwork within the unit.

In conclusion, while some argue that women are unsuitable for military and police roles due to physical limitations and potential disruptions to unit cohesion, others contend that they can excel through intelligence, strategy, and specialized skills. I believe that recruitment criteria should prioritize individual capabilities, allowing both men and women to contribute effectively to national security while maintaining high operational standards and teamwork within units.

Task 1: The plans below show the South Wing of Walton Museum in 2008 and in 2012 after it was redeveloped.

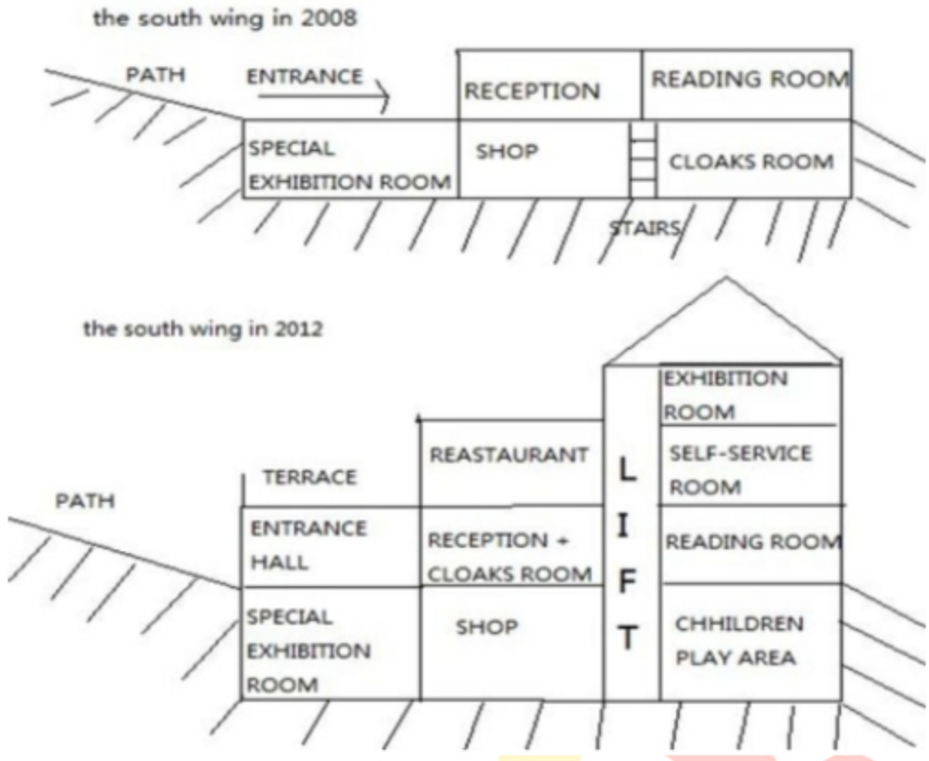
Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059



Sample: The diagrams illustrate the changes made to the South Wing of the Walton Museum between 2008 and 2012 following a redevelopment project.

Overall, the layout of the South Wing was significantly modernized and expanded, with several new facilities added such as a restaurant, a children's play area, and a lift. Some areas were relocated or combined, enhancing the functionality of the space.

In 2008, the South Wing featured six main areas, including a reception area, a shop, a reading room, a cloaks room, and a special exhibition room. The reception and cloak room were located on the upper right side, while a staircase was positioned centrally. The shop and the special exhibition room occupied the left side of the wing.

By 2012, several major changes had been implemented. The reception and cloak room were merged into a single space and moved to the previous shop area. A lift replaced the stairs and connected four newly added rooms arranged vertically: an exhibition room, a self-service room, the reading room, and a children's play area. Meanwhile, a restaurant and terrace were added

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Mọi tài liệu được share dưới dạng PDF hoặc từ tài khoản khác sẽ không đủ đề và không chịu sự kiểm soát từ thầy.

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

above the reception area, and the entrance was transformed into a proper entrance hall. The shop and the special exhibition room remained in their original positions.

Task 2: Some people think that governments should spend more money on sports facilities for top athletes. Others argue that this money should be spent on sports facilities for ordinary people. Discuss both sides and give your own opinion.

Sample: The topic of whether governments should invest money in training top athletes or building sports facilities for the public is always a controversial one. I believe that in a developing country like Vietnam, the investment should first go to the public, then train top athletes.

There are various reasons why I think governments should prioritize investing in building sports facilities for the public. Firstly, this money is from citizens' taxes, and it is only fair if they receive direct benefits from these tax payments. As a result, building facilities that can help them maintain their shape is more important than investing in only a few individuals. Secondly, the consequences of not investing enough in public sports facilities are more critical than those in top athletes. For example, if citizens do not have space to exercise, they run a higher risk of developing more illnesses. These illnesses are a burden to society. Because of this, it is more beneficial for countries with limited budgets to invest in the public.

However, that is not to say that top athletes should not receive any investment at all. Firstly, professional athletes are the face of the country they represent at international sports competitions, like the World Cup or the Olympics. Many foreigners associate countries with their most successful athletes, such as South Korea with top archers or the US with top swimmers. Secondly, famous athletes serve as both entertainment and motivation for the public. For example, many enjoy watching sports because athletes remind them of human's maximum physical capacity, thus motivating them to exercise. Moreover, many find the number of hard work athletes put into their training and performance inspiring. As a result, people feel incentivized to work harder.

In conclusion, although there are indisputable benefits of investing in training top athletes, I believe that countries with limited budgets should first build sports facilities for the public.

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

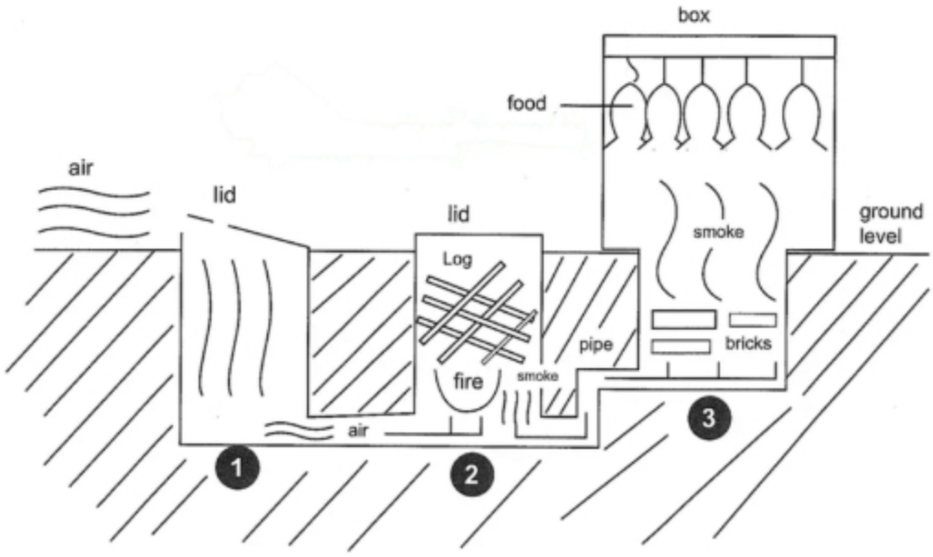
Task 1: The diagram below describes the structure of a home smokery and how it works.

A smokehouse



Sample: The diagram illustrates the structure and operation of a home smokery, showing the three main stages involved in the process of smoking food.

Overall, the system consists of three connected compartments, two of which are located underground to facilitate the cooling and passage of smoke, while the final smoking box is positioned above ground level. The process commences with air intake and concludes when the smoke reaches the food.

The process commences at the first chamber, which acts as the fresh air intake point, drawing fresh air in through an opening covered by a lid. The air then descends and flows along a duct into the second compartment, where the fire is located. This second section contains logs which are ignited to generate the necessary smoke and heat. This chamber also has a lid, suggesting its function is to control the air supply to the fire.

Subsequently, the smoke produced in the fire chamber is channeled through an angled pipe. This pipe directs the smoke upwards to the third and final section, which is the smoking box positioned at ground level. Inside this box, the food, represented here by hanging fish, is placed

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Mọi tài liệu được share dưới dạng PDF hoặc từ tài khoản khác sẽ không đủ đề và không chịu sự kiểm soát từ thầy.

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

to be cured. The smoke circulates within this box before eventually exiting, signifying the completion of the smoking cycle.

Task 2: In the future, it seems more difficult to live on Earth. Some people think more money should be spent on researching another planet to live on, such as Mars. To what extent do you agree or disagree with this statement?

Sample: The future of life on Earth is a topic of much concern with many challenges that will make it increasingly difficult to sustain life on our planet. Some people believe that more money should be spent on researching other planets to live on, such as Mars. In my opinion, this is not a realistic or viable solution to the environmental challenges we face on Earth.

Firstly, investing large sums of money into space exploration and colonization of other planets, such as Mars, is a questionable use of resources. At present, we still lack the necessary technology and knowledge to make such a mission a reality. Even if we were to develop the necessary technology, it would require vast amounts of resources and time to build and maintain such colonies. Given the current state of our planet, we should prioritize investing resources into finding solutions to environmental issues and reducing our carbon footprint to help mitigate the effects of climate change.

Furthermore, investing in space exploration may divert resources from more pressing issues, such as poverty reduction, healthcare, and education. By focusing on space exploration, we risk neglecting critical issues that are closer to home and impact the lives of millions of people on a daily basis. For instance, many countries have been facing a growing wealth gap, with millions of people living in poverty and struggling to access basic necessities such as food, shelter, and healthcare. By allocating a significant portion of the budget to space exploration, we are neglecting these issues and failing to provide for the most vulnerable members of society.

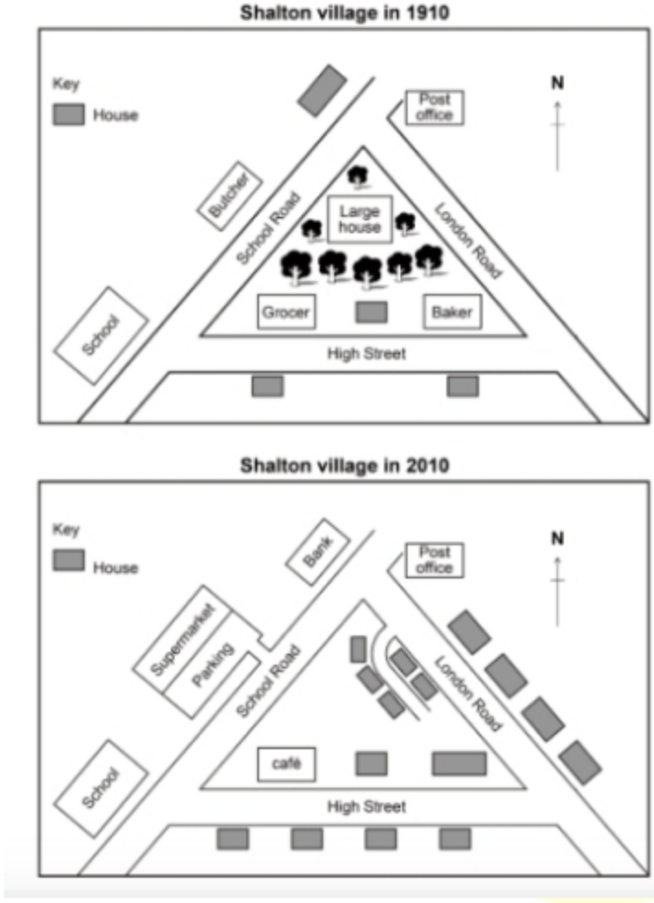
In conclusion, while the idea of researching other planets as an alternative to Earth may seem appealing, it is not a practical or responsible use of resources. We should instead focus on finding solutions to the problems we face on Earth, such as climate change and poverty, and work towards a sustainable future.

Task 1: The maps show the changes in Shalton village from 1910 to 2010.

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Mọi tài liệu được share dưới dạng PDF hoặc từ tài khoản khác sẽ không đủ đề và không chịu sự kiểm soát từ thầy.

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059



Sample: The maps detail the layout modifications that occurred in Shalton Village over a 100-year period, from 1910 to 2010.

Overall, while the main road infrastructure remained unchanged, the village underwent significant residential and commercial development. The most notable changes were the expansion of housing and the replacement of traditional local shops with modern amenities such as a supermarket and a bank.

In 1910, the village was defined by three main roads. School Road ran from the northeast to the southwest, while London Road extended from the northwest to the southeast. These two roads met at a central junction where a Post Office was situated. The High Street crossed through the south of the village. At that time, a large residence surrounded by trees occupied the central area between the roads. Commercial facilities included a grocer and a baker located at the corners of the intersection, and a butcher located to the west of School Road.

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Mọi tài liệu được share dưới dạng PDF hoặc từ tài khoản khác sẽ không đủ đề và không chịu sự kiểm soát từ thầy.

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

By 2010, the village had been transformed. The large central house and its surrounding trees were cleared. In terms of residential changes, the two original houses on the High Street were demolished and replaced by a complex of four smaller residences. Additionally, new housing was constructed along London Road. Commercially, the grocer was converted into a cafe, and the butcher shop was removed to make way for a new Supermarket and a designated car park. Finally, a new bank was built directly opposite the Post Office, which was one of the few features to remain in the same location.

Task 2: More people today put their personal and private information online (address, telephone number, credit card number) to do everyday activities such as banking, shopping, and socializing. Is this a positive or negative development?

Sample: In the digital age, the increasing popularity of online platforms has facilitated the seamless integration of personal information into daily activities. While some argue that this trend can bring about a sense of convenience, I strongly believe that it poses more significant risks to privacy and security.

On the one hand, the trend towards sharing personal information online offers unparalleled convenience. When submitting addresses, credit card numbers, and other essential information, shoppers can easily purchase goods and services as well as conduct financial transactions at the comfort of their home. By uploading stories and pictures to Facebook or similar social platforms, individuals can interact with friends and family regardless of geographical barriers. This level of accessibility enhances efficiency and productivity, enabling people to manage their lives with unprecedented ease.

IELTS FORECAST
BY PHAT DUONG

Despite this, there are greater concerns about the potential risks associated with online information sharing. The digital landscape is rife with threats such as hacking, identity theft, and data breaches, which can have devastating consequences for individuals and organizations alike. This issue is further exacerbated by the fact that submitting and saving personal data online leaves individuals vulnerable to surveillance and exploitation by both malicious actors and corporate entities. This erosion of privacy undermines trust in online systems, thereby potentially deterring users from fully engaging with digital technologies.

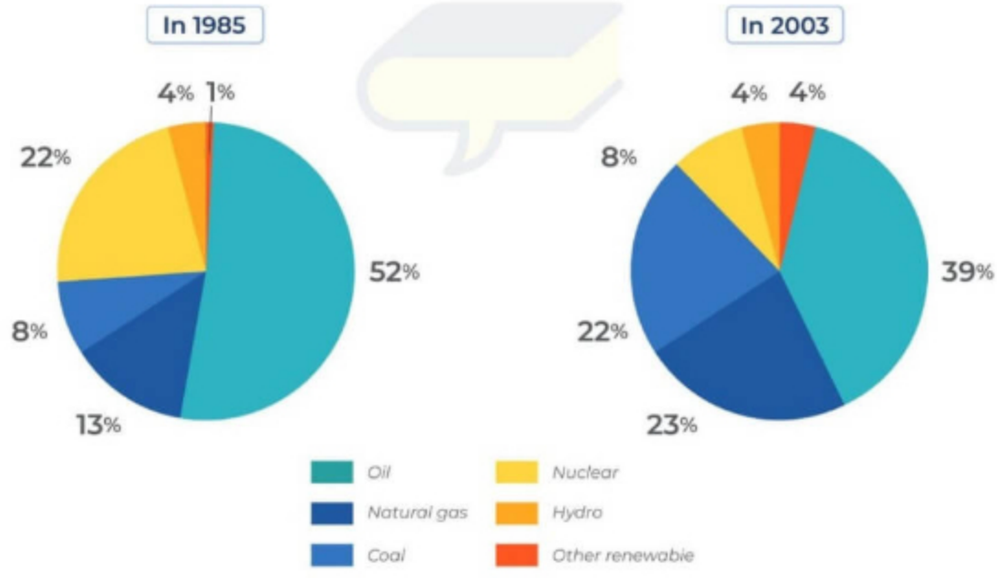
In conclusion, although the trend of sharing personal information online for routine activities can provide users with convenient experiences, it also exposes individuals to major risks to privacy and security. As such, I take the view that this development is more detrimental.

Task 1: The charts below show changes in the proportion of energy produced from different resources in the country in 1985 and 2003.



Sample: The two pie charts illustrate the proportion of energy produced from six different resources in a particular country over an 18-year period, from 1985 to 2003.

Overall, it is clear that oil remained the primary source of energy in both years, although its dominance decreased significantly. The period saw a notable shift away from fossil fuels like oil and coal towards alternative sources, most notably natural gas and hydro power.

In 1985, oil was by far the largest contributor, accounting for over half of all energy production at 52%. This was followed by coal and natural gas, which made up 22% and 13% respectively. Hydro energy represented 8% of the total, while nuclear and other renewables contributed the least at 4% and 1% of the total energy supply.

By 2003, the distribution of energy production had changed dramatically. The proportion of oil fell to just 39%, while coal saw an even more dramatic decline, dropping by more than half to only 8% of the total. In contrast, natural gas and hydro power experienced significant growth.

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

The figure for natural gas nearly doubled, rising to 23%, and hydro power's share almost tripled to 22%. Meanwhile, the percentage of nuclear energy remained constant at 4%, and other renewables saw a modest increase to 4%, matching the figure for nuclear energy.

Task 2: Recent research suggests that the majority of criminals who are sent to prison commit crimes after they are released. Why is this the case? What can be done to solve this problem?

Sample: Recent research suggests that a large proportion of prisoners commit further crimes after being released, which has become a serious concern in many societies. This pattern is often linked to weak deterrence in the legal system and the difficulties former inmates face when attempting to reintegrate into society. However, several practical measures could help address this problem.

One major reason why many former prisoners return to crime is that prison sentences do not always function as an effective deterrent. In some cases, punishments are relatively lenient, meaning offenders may view imprisonment as a temporary setback rather than a serious warning. Under such circumstances, the fear of legal consequences may be insufficient to discourage individuals from committing further offences. Another important factor is the difficulty many ex-prisoners experience when trying to rebuild their lives after release. A criminal record often makes it challenging to find stable employment, while the lack of vocational skills further limits job opportunities. Without reliable income or social support, some individuals may see illegal activities as the easiest way to survive.

IELTS FORECAST
BY PHÁT DƯƠNG

Addressing this issue requires both stronger deterrence and more effective rehabilitation. Governments could introduce tougher penalties and closer supervision for repeat offenders, which would make criminal behaviour less appealing. For example, Singapore is widely known for its strict law enforcement and firm sentencing policies, which contribute to relatively low crime rates. Nevertheless, punishment alone is unlikely to solve the problem. Preparing prisoners for life after release is equally important. In Norway, prisons place significant emphasis on education, vocational training, and gradual reintegration into society, helping inmates develop

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

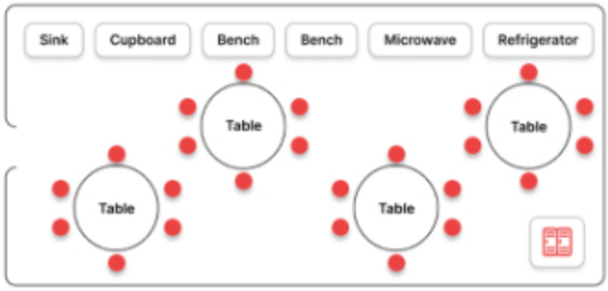
Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

practical skills and secure employment after release. Such initiatives greatly reduce the likelihood that former prisoners will return to criminal activity.

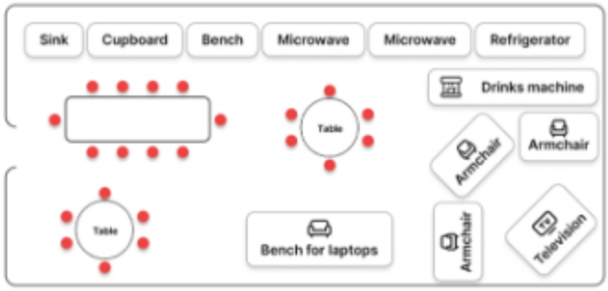
In conclusion, high rates of reoffending are largely caused by weak deterrence and the social and economic challenges faced by former prisoners. A balanced approach that combines stricter legal consequences with comprehensive rehabilitation programmes is therefore essential to reduce repeat crime.

Task 1: The plans show a student common room from five years ago and now.

Student common room- 5 years ago



Student common room- Now



Sample: The plans illustrate the layout modifications of a student common room over a five-year period, comparing its past configuration with its current state.

Overall, the room has undergone significant modernization. The most notable changes are the reduction in seating capacity for group study and the introduction of recreational facilities and electronic appliances, including a television and a drinks machine.

Looking at the northern section first, the arrangement of amenities remains largely similar to five years ago. Previously, a cupboard, sink, two benches, a microwave, and a refrigerator were lined

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

up in succession from west to east. In the current layout, the only modification in this area is that one of the two benches has been replaced by a second microwave; the cupboard, sink, and refrigerator remain in their original positions.

Turning to the rest of the room, the central and southern areas have been completely reconfigured. Five years ago, the space was occupied by four circular tables with chairs and a bookshelf in the southeast corner. Currently, the bookshelf and two of the round tables have been eliminated. The western side now features a large rectangular table, while a designated bench for laptops has been installed along the southern wall. The eastern side has been converted into a relaxation zone, featuring a drinks machine, three armchairs, and a television. Only one original round table remains in the center, and another is situated near the laptop bench.

Task 2: Art classes, such as painting and drawing, are as important for children's development as other subjects, so they should be compulsory in high school. Do you agree or disagree?

Sample: It is often argued that art classes, such as painting and drawing, are no less important to children's development than academic subjects and should therefore be compulsory in high schools. I strongly agree with this view for several reasons.

Artistic education plays a vital role in developing cognitive and emotional skills in children. One key benefit is that art activities stimulate divergent thinking and encourage original expression. When students experiment with colours, forms, and techniques, they learn to generate multiple solutions rather than relying solely on memorised methods. Consequently, this creative growth contributes to stronger problem-solving skills and greater innovation in both academic and real-world contexts. In addition to this, artistic education also supports emotional and psychological development by providing a channel for self-expression. For example, during periods of stress or anxiety, pupils often use painting or drawing to communicate complex emotions. As a result, this artistic outlet promotes healthier emotional regulation and helps improve overall mental well-being.

Moreover, integrating art into the curriculum supports balanced development and inclusivity. The first reason behind this is that some learners naturally excel in visual or hands-on disciplines

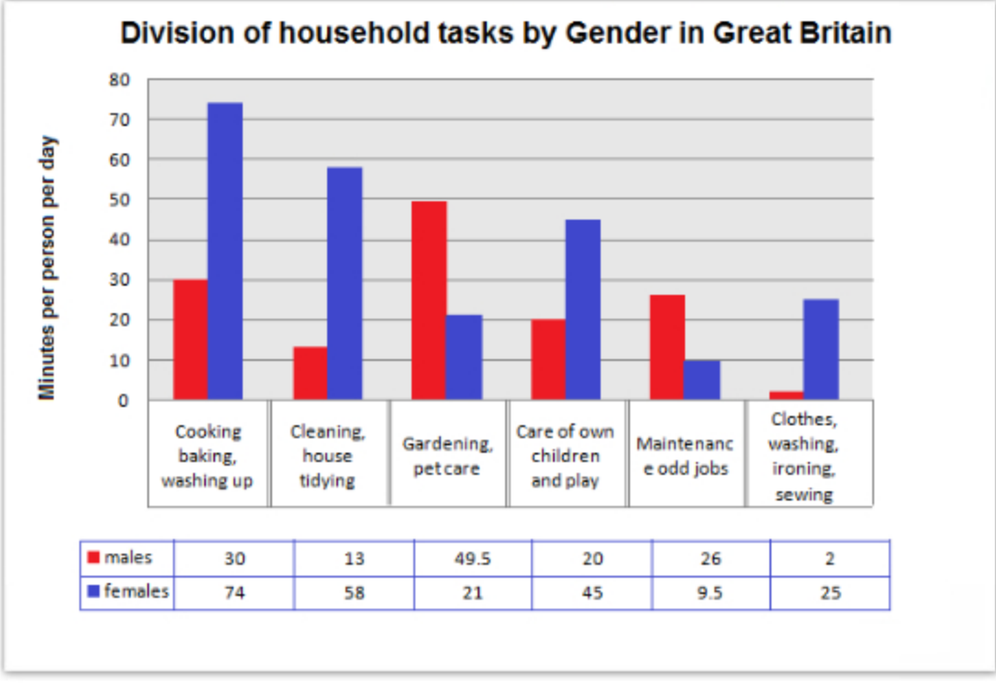
TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Mọi tài liệu được share dưới dạng PDF hoặc từ tài khoản khác sẽ không đủ đề và không chịu sự kiểm soát từ thầy.

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

more than in conventional academic areas. For students who struggle with lectures and written exams, art offers an alternative route to achievement and meaningful engagement. Thus, the presence of art classes in the curriculum can boost self-esteem and inspire broader participation across academic subjects. Moreover, engaging in artistic practice cultivates transferable skills that are valuable in both education and the workplace. For instance, group mural projects promote teamwork and communication, while individual drawing exercises refine observational accuracy and attention to detail. Consequently, these skills—collaboration, focus, and precision—can translate effectively into other disciplines and future professional environments. In conclusion, making art classes compulsory in high schools is a positive development that fosters creativity, emotional health, and inclusive skill-building. By valuing the visual arts on par with core subjects, educators can nurture adaptable, empathetic, and innovative young people prepared for diverse challenges.

Task 1: The chart shows the division of household tasks by gender in Great Britain.



Sample: The two bar charts illustrate how domestic chores are shared between men and women in Great Britain, showing both the percentage of adults who undertake each task and the average time they spend on it.

Overall, cooking stands out as the most common—and most time-intensive—activity. In addition, women are more engaged than men in most cases, with the sole exception being house repairs, while pet care shows near parity.

Regarding participation rates, roughly 85 % of women cook compared with 60 % of men, while the gap for cleaning is narrower at about 60 % versus 40 %. Pet care is the only task that attracts equal interest, being undertaken by just over one-fifth of both sexes (around 22 % of men and 20 % of women). House repairs, however, are overwhelmingly male-dominated: about one man in five carries them out, whereas fewer than one in ten women do so.

A similar pattern emerges in the time allocation. Women spend approximately 85 minutes preparing meals, a full 25 minutes longer than their male counterparts. Cleaning shows a comparable disparity, at 68 minutes for females against 45 for males. By contrast, both genders devote an identical 20 minutes to looking after pets. Finally, men carry out repair work for about 20 minutes on average—four times the meagre five minutes recorded for women.

Task 2: Nowadays, some parents put a lot of pressure on their children. What is the reason for this? Is this a positive or negative development for the children?

Sample: Many parents nowadays are pressuring their children to be successful and willing to take any action to ensure that. I think the competitive state of current society contributes to this, and that this is mostly a negative development.

I am sure parents who are obsessed with their children's success have their reasons to be so. Most of them have more resources to invest, such as money to send kids to cram schools or to find the best tutor. There are many learning resources available as well, like art schools or soft skills workshops. Parents overwhelmed by these resources will try to send their kids to each one possible. Another reason is the competitive state of current society. Reunions for adults now are just opportunities for parents to brag about their kids, which strengthens the belief that parents need to expect more from their kids. How society perceives parents depends on their children's achievements.

Regardless of the reasons for this development, it is indeed detrimental for both parents and children. The obsession with success is mentally exhausting for both parties when they

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

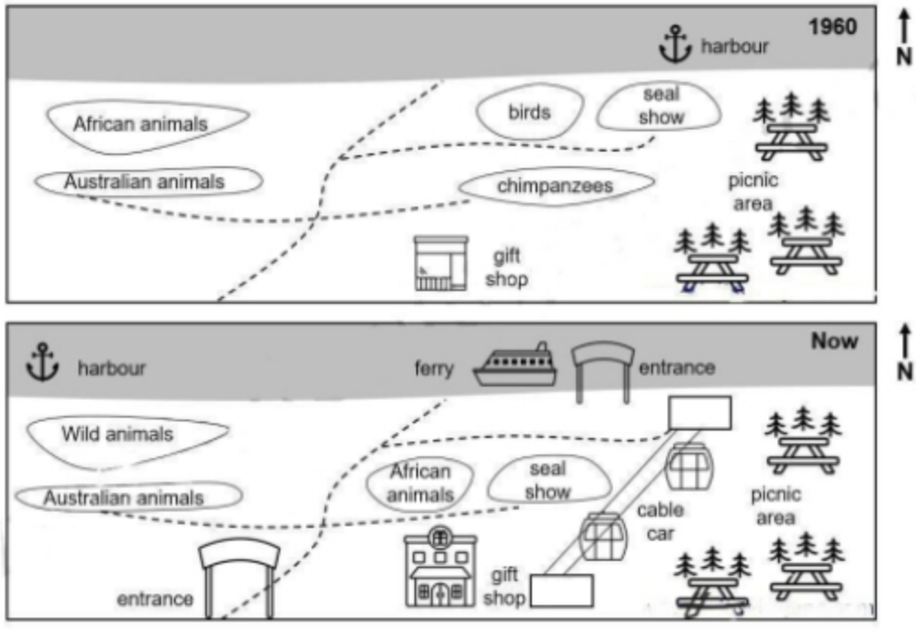
Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

constantly worry about how others are doing and how to improve. Many teens and young adults fall into depression, anxiety, and extreme stress due to this. The rates of adolescent mental health problems and suicide are both higher than ever before, which is proof of this burnout. Moreover, this obsession with success that parents channel on their children puts a strain on their relationships with one another. This generation is witnessing many children choosing to spend less time with their parents to avoid being scrutinized and berated.

In conclusion, it is understandable that parents expect more from their children in terms of personal success. However, many should reconsider the pros and cons of this trend, as it has tremendous effects on both parties.

Task 1: The map below shows the changes that have taken place at a zoo in Australia between 1960 and now.



Sample: The two maps illustrate the significant redevelopment of an Australian zoo, its layout in 1960 with its current configuration.

Overall, the zoo has undergone a substantial modernization, primarily characterized by the significant enhancement of its transportation infrastructure and accessibility. The most striking developments are the establishment of two new entrances and the introduction of both a ferry service and a cable car system.

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Mọi tài liệu được share dưới dạng PDF hoặc từ tài khoản khác sẽ không đủ đề và không chịu sự kiểm soát từ thầy.

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

In 1960, the zoo was accessible via a northern harbour. The eastern sector featured a Picnic Area adjacent to a Seal Show. Centrally, enclosures for birds and chimpanzees were located near the Gift Shop, while the western area was designated for housing African and Australian animals. By the present day, access has been diversified with a new Entrance and ferry terminal by the harbour, and a second Entrance in the south-west. The cable car now runs from a station located in the central southern area, next to the Gift Shop, to the north-eastern part of the zoo near the new entrance and picnic area. The original Gift Shop has been significantly expanded. Furthermore, the central enclosures for birds and chimpanzees have been replaced by African Animals, whose former western habitat now houses 'Wild animals'. The Seal Show has been relocated from the north-eastern corner to a central position beside the African Animals enclosure, while the Picnic Area remains unchanged.

Task 2: Some countries spend a lot of money preparing competitors to take part in major competitions such as the Olympic Games or football World Cup. Some people say that it would be better to spend this money encouraging children to take up sports from a young age. To what extent do you agree or disagree?

Sample: Preparation for participation in international sports competitions has been receiving substantial financial resources from governments around the world. While some individuals contend that investing money to promote sports among youngsters would be more worthwhile, I believe that both initiatives hold significant value and deserve appropriate funding.

On the one hand, athletes deserve to receive state funding to get ready for high-profile competitions such as the Olympics or the World Cup. The primary reason is that accomplishments at such events are a source of tremendous national pride, since only the most elite sportsmen globally manage to participate. Therefore, merely being able to compete at that level is already a cause for great joy for people of that country, let alone winning actual prizes or medals. A case in point is when Vietnam's national football team participated in the U23 regional championship. The team's journey captured the attention of sports fans as well as laymen throughout the country, and every victory culminated in fervent acts of celebration. Even though

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

they did not reach the final stage, their efforts brought the entire nation together and consequently instilled in Vietnamese people a profound sense of patriotism.

On the other hand, authorities should also allocate greater investment to raising public awareness of the importance of sports participation, especially among children. Firstly, by motivating more individuals to engage in sports, governments could enhance the overall physical well-being of their citizens. For instance, it has been observed that people who play sports are more likely to stave off potential ailments such as the flu or health issues like obesity, as they do not lead a sedentary lifestyle. In the long run, a healthier population would reduce the strain on healthcare services because fewer hospital visits would be required. As a result, authorities could redirect financial resources toward addressing other pressing social problems such as poverty or homelessness. Furthermore, emphasizing sports from an early age could help cultivate a more productive workforce, as individuals would be better able to endure physical demands at work and contribute more effectively to society thanks to the stamina developed through lifelong physical activity.

In conclusion, I believe that training elite athletes for global competitions and encouraging young people to participate in sports are equally important. Therefore, governments should not prioritize one initiative at the expense of the other.

Task 1: The table shows the number of people from five European nations living in each other's countries in 2011.

Where they live	Number of people living in each other's country					Total
	British	Germany	Italian	Polish	Spanish	
British		297.000	119.000	550.000	71.000	1.037.000
Germany	104.000		556.000	426.000	112.000	1.198.000
Italian	79.000	42.000		106.000	19.000	196.000
Polish	760	4.400	670		170	6.000
Spanish	391.000	196.000	188.000	86.000		861.000
Total	524.760	539.000	863.670	1.168.000	202.170	3.298.000

Sample: The table provides data on the number of immigrants from five European countries namely Germany, Britain, Poland, Spain, and Italy, living in each other's countries in 2011, as well as the total immigration figures for each country.

Overall, Germany and Britain emerged as the most popular destinations for immigrants, while Poland was the least favored. Polish nationals constituted the largest group of immigrants across the countries surveyed, while Spanish nationals represented the smallest proportion.

Germany topped the list of preferred destinations, attracting a total of 1,198,000 immigrants. Of these, nearly half were Italian (556,000), followed by Polish immigrants (426,000), with smaller numbers from Spain (112,000) and Britain (104,000). Britain, the second most popular destination, had a total of 1,037,000 immigrants. Among immigrants, Polish nationals made up the largest group in Britain, with 550,000 people, almost double the figure for Germany and quintuple that of Italy. The Italian and Spanish communities were smaller, at 119,000 and 71,000, respectively.

In Spain, a total of 861,000 immigrants settled in the country. British nationals formed the largest group (391,000), followed by Germans (196,000), Italians (188,000), and Polish immigrants (86,000). Italy had 196,000 immigrants in total, with Polish nationals again making up the largest portion at 106,000, surpassing the number of Italian immigrants by 25,000. Germans living in this country accounted for 42,000 immigrants, double the number of Spaniards (19,000). Meanwhile, Poland had the smallest immigrant population, with only 6,000 immigrants in total.

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Mọi tài liệu được share dưới dạng PDF hoặc từ tài khoản khác sẽ không đủ đề và không chịu sự kiểm soát từ thầy.

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

Of these, the majority were Germans (4,400), followed by 760 British, 670 Italians, and just 170 Spaniards.

In terms of total immigration rates, Poland recorded the highest number of emigrants, with 1,168,000 people living abroad, followed by Italy with approximately 840,000 emigrants. Germany and Britain showed relatively similar numbers, with 524,000 and 539,000 immigrants, respectively. Spain had the lowest immigration rate, with 202,000 people migrating.

Task 2: In today's world of advanced science and technology, we still greatly value our artists, such as musicians, painters, and writers. Why do you think it is? Are the arts as important in people's lives as technology?

Sample: In an era dominated by rapid technological progress and scientific discovery, our deep appreciation for artists remains unchanged. While science explains the physical mechanisms of the world, the arts serve a different but equally vital purpose by exploring the emotional and moral aspects of human life.

Principally, artistic creations provide deep emotional and personal insights into life that cannot be measured by science. Unlike scientific data, which relies on precise facts and numbers, creative mediums capture the complex range of human feelings and personal struggles. Notably, a novel about profound grief or a painting showing deep loneliness allows audiences to feel and empathize with someone else's suffering, which helps them improve their own emotional awareness. Furthermore, exposure to such moving works encourages individuals to reflect on their own values and life choices. Listening to an inspirational song or reading an autobiography, for instance, prompts people to relate these stories to their own lives, ultimately fostering self-discovery and a stronger sense of identity.

Beyond individual reflection, the arts pass down cultural and moral perspectives that lie outside the scope of scientific knowledge. Traditional folk music and literature, for example, naturally preserve the customs, social norms, and collective memories of a community. Consequently, by experiencing these cultural works, people can better understand their heritage, which significantly strengthens social unity. Crucially, the arts also confront audiences with complex ethical dilemmas and human conflicts. By forcing people to consider different viewpoints and

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

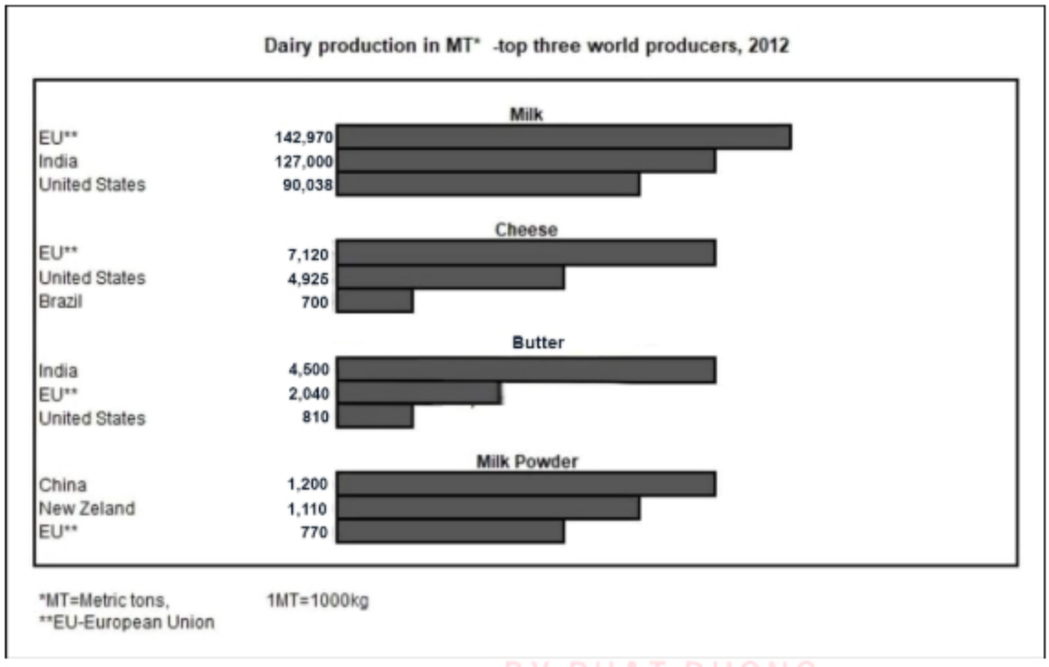
Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

the consequences of human actions, creative stories develop critical thinking about right and wrong. In contrast to science, which mainly explains how the physical world works, art encourages reflection on how people should live and behave.

In conclusion, although science and technology drive the development of modern society, the arts remain essential for understanding human nature. By exploring deep personal emotions and preserving shared moral values, artistic works provide the spiritual and ethical guidance that objective data alone can never offer.

Task 1: The charts below give information about the world's top three producers for four different dairy products (milk, cheese, butter, milk powder) in the year of 2012.



BY PHAT DUONG

Sample: The provided chart compares different countries in terms of their dairy production in 2012. Products surveyed include milk, cheese, butter, and milk powder, and the unit of measurement is Metric tons (MT).

Overall, the EU emerged as the leading producer of both milk and cheese, while India and China recorded the highest figures for butter and milk powder, respectively. Among the four products, milk was by far the most popular item as its production far exceeded that of the others by a significant margin.

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Mọi tài liệu được share dưới dạng PDF hoặc từ tài khoản khác sẽ không đủ đề và không chịu sự kiểm soát từ thầy.

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

With nearly 143,000 MT, the EU countries led in milk production. This was closely followed by India and the US, with respective figures standing at 127,000 and 90,000 MT. Regarding cheese production, the EU also dominated, manufacturing approximately 7,120 MT, which surpassed the US's figure by 2,000 MT and was seven times as high as Brazil's production.

Concerning butter, India manufactured approximately 7,500 MT, nearly quadruple that of the EU. Far below was the US, producing just around 800 MT. Notably, milk powder production was considerably lower compared to the other dairy products, with the figures for top producers namely China, New Zealand, and the EU just varying slightly in the range from 770 MT to 1200 MT.

Task 2: Some people think that one of the best ways to solve environmental problems is to increase the cost of fuels for cars and other vehicles. To what extent do you agree or disagree?

Sample: The notion that raising the cost of fuel for transportation can alleviate environmental issues have been gaining traction. From my point of view, while this solution can help tackle environmental problems to a degree, creating an incentive for individuals and enterprises to take action against these problems would be a more effective approach.

On the one hand, an increase in the cost of fuel may prove effective in decreasing the traffic volume, thus reducing harmful emissions that can affect the environment. First, this policy would raise people's awareness of the frequency and length of their travels. Due to the rise in expenses, people would have to cut down on unnecessary trips. Moreover, as fuel prices soar, more sustainable mobility choices that rely less on carbon-intensive fuels, namely buses that run on biofuel, will witness a surge in demand. To illustrate, in America, since 2010, hybrid vehicles and smaller transports have had a growing market as a consequence of rising fuel prices.

On the other hand, increasing fuel cost cannot tackle all environmental issues. As a matter of fact, car emissions are not the sole cause, but emissions from livestock farming and other industries are also significant contributors to pollution. To illustrate, what is surprising is that livestock accounts for 64 percent of total methane emission - a destructive gas for the ozone layer. Hence, providing individuals and businesses with an incentive to protect the environment

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

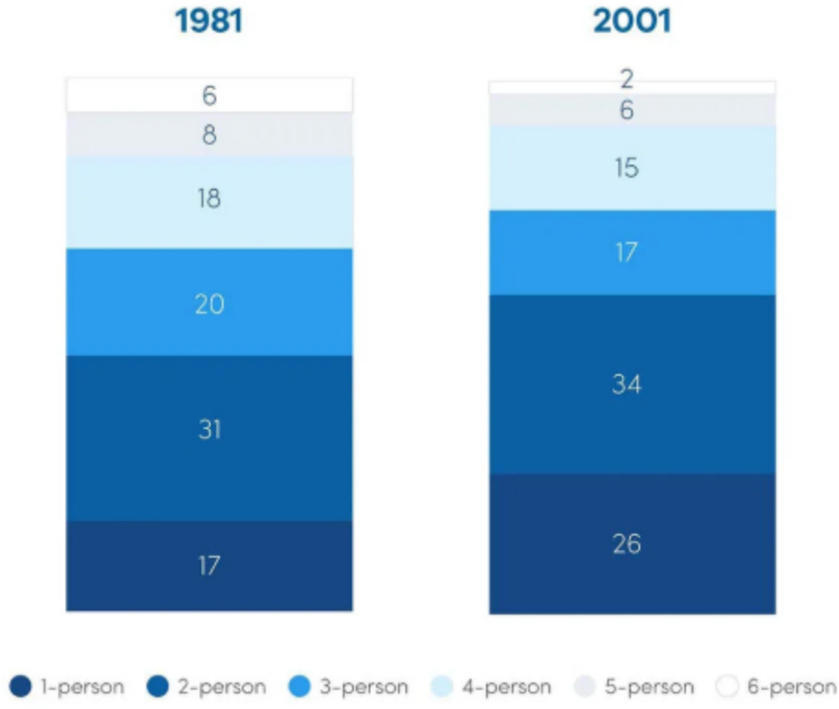
Mọi tài liệu được share dưới dạng PDF hoặc từ tài khoản khác sẽ không đủ đề và không chịu sự kiểm soát từ thầy.

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

would be more effective. For example, the government can apply a lower tax on companies which leave less impact on their surroundings. In this way, enterprises will proactively find ways to reduce their carbon footprint.

All in all, increasing fuel prices can help solve environmental problems to a degree. However, the most effective solution would be to provide a stimulus for society to intentionally reduce damaging impacts to our habitat.

Task 1: The chart compares the number of people per household by percentage in the UK in 1981 and 2001.



Sample: The stacked bar charts delineate the household compositions with respect to the number of occupants in the UK in 1981 and 2001.

As is shown in the graph, most households in the UK had 2 occupants. Over the surveyed period, single and 2-person households enjoyed upswings whilst other demographics experienced a corresponding downturn.

Regarding the first stacked bar, 31% of households consisted of 2 occupants, heading the list of total demographics. Next came 3-person households with 20%, as opposed to single and

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Mọi tài liệu được share dưới dạng PDF hoặc từ tài khoản khác sẽ không đủ đề và không chịu sự kiểm soát từ thầy.

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

4-member households, accounting for 17% and 18% in turn. Large household sizes ranked in bottom place with 8% for 5-occupant and 6% for 6-occupant units.

20 years later, households with a single person living alone or two persons became dominant, with the figure for the former rising up by 9%, amounting to over one-quarter of total surveyed households. Meanwhile, households with 3 or 4 occupants recorded a fall of 3%, finishing at 17% and 15% respectively. Remaining in the last place were household units of 5 or 6 members, with their figures decreasing to 6% and 2%.

Task 2: It is a natural process for animal species to become extinct. There is no reason why people should try to prevent this from happening. To what extent do you agree or disagree?

Sample: People have different views about whether or not extinction of animal species is a natural phenomenon, and preventing this process is pointless. From my perspective, I am completely against this notion for a number of reasons.

First of all, humans are partly responsible for various disappearances of animal species. While many wild beasts went extinct from natural causes, a greater proportion of species are on the verge of extinction or no longer extant as a result of human activities. Mass deforestation to build infrastructure or for timber harvesting has cost wild animals their living habitats, leading to food sources depletion and eventually, death. To illustrate, Australia's recent wildfires have pushed around 100 species closer to extinction. Hunting is another notorious cause for the dwindling of animals' population as many species such as rhinos or elephants are hunted for their body parts. For example, the African Black Rhinos are no longer in existence for being hunted for their horns.

HELLO FORECAST
BY PHAT DUONG

Another point is that preventing animals from being extinct is critical to our ecosystem. The loss of animal species could disrupt our ecosystem's balance. Since all living organisms' lives in a habitat are interrelated, once a species succumbs to extinction, other animals that depend on it will be affected and eventually disappear. This will lead to the lack of diversity and can also cause potential damage to our economy. For example, in 2013, the sunflower starfish in Northern California declined in number due to a disease, thus causing its prey - the purple sea urchins to

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

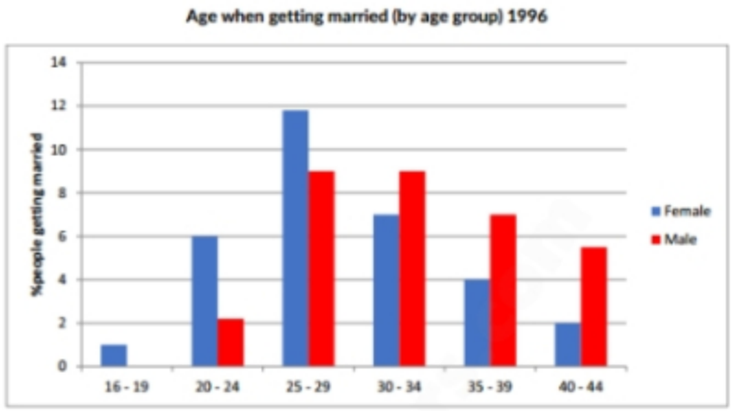
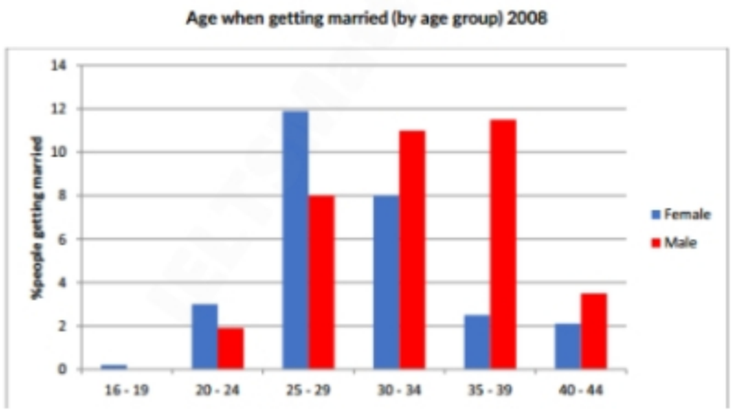
Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

flourish. This sudden proliferation has damaged the red urchins' population and also exhausted a great source of sushi, which resulted in a slump in the area's economy.

To summarize, the process of animal extinction has been escalated by human activities such as hunting and deforestation. This will have grave consequences on both our ecosystem and our economics, thus it is urgent that we take action to protect all animal species.

Task 1: The charts below give information on the ages of people when they got married in one particular country in 1996 and 2008.





Sample: The bar charts provide a comparative analysis of the age distribution of males and females entering into marriage within a specific nation across two distinct years, 1996 and 2008. Overall, there was a discernible shift towards marrying at a later age for both genders over the twelve-year period. Consistently, women tended to wed at a younger age compared to men, who predominantly occupied the higher percentage shares in older age brackets in both years.

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Mọi tài liệu được share dưới dạng PDF hoặc từ tài khoản khác sẽ không đủ đề và không chịu sự kiểm soát từ thầy.

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

In 1996, the highest proportion of females married between the ages of 25 and 29, accounting for approximately 12%. Men, conversely, displayed a broader peak, with similar percentages of roughly 9% in both the 25-29 and 30-34 age groups. Notably, women significantly outnumbered men in the younger brackets; for instance, in the 20-24 age range, 6% of women married compared to only about 2% of men. This trend reversed from age 30 onwards, where male percentages exceeded those of females.

By 2008, while the peak marriage age for women remained stable at 25-29 (hovering near 12%), the peak for men shifted dramatically to the older 35-39 cohort, reaching approximately 11.5%. The tendency to delay marriage was evident as rates for younger groups fell; female marriages in the 20-24 bracket dropped to 3%. Meanwhile, male figures in the 30-39 range surged, with the 35-39 group rising from 7% to nearly 11.5%, thereby widening the gap between genders in these older categories.

Task 2: Some people think that certain old buildings are more worth preserving than the other ones. Which types of old buildings should be preserved? Do you think that the advantages of preserving these old buildings outweigh the disadvantages?

Sample: Preserving historic buildings is a contentious issue, with some arguing that certain buildings should be preserved more than others. I believe we should prioritize the preservation of buildings with the greatest cultural and historical significance. In addition, the drawbacks of keeping historic structures exceed their benefits slightly since preservation expenses and their effect on economic growth must be acknowledged.

HELLO FORECAST
BY PHÁT DƯƠNG

Firstly, buildings with significant cultural or historical value should be preserved. This includes landmarks such as ancient temples, castles, and churches, which serve as a testament to a region's rich history and cultural heritage. Preserving such buildings helps to maintain a sense of continuity and connection to the past, providing a window into the history and culture of a community. Secondly, buildings with unique architectural features should also be preserved. These could include art deco buildings, Gothic-style churches, and Victorian mansions. Such buildings represent the pinnacle of design and architecture from their respective eras and remind them of the evolution of architectural styles over time.

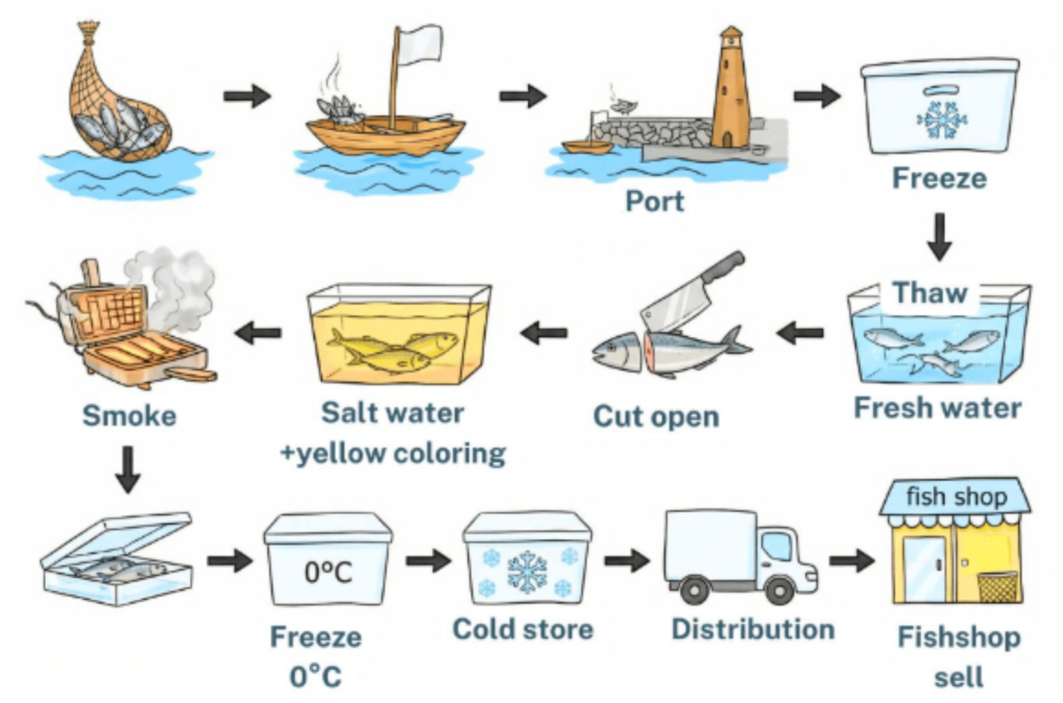
Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

However, preserving old buildings also has its drawbacks. Maintaining and preserving such buildings can be prohibitively expensive, and resources are often limited. This can divert resources away from other pressing needs, such as the construction of new infrastructure, affordable housing, and public services. Moreover, preserving old buildings can sometimes come at the cost of economic development. Preservation efforts may hinder economic growth by limiting land use and obstructing new development. This can lead to reduced job opportunities and economic prosperity for the region.

In conclusion, the most culturally and historically significant structures should be preserved first. Moreover, the expenses of preservation and its influence on economic growth must also be evaluated, and these factors marginally offset the benefits of keeping historic structures.

Task 1: The diagram below shows the process of producing smoked fish.

The diagram details the process of making smoked fish.



Sample: The diagram illustrates how smoked fish is produced.

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Overall, the process consists of several distinct stages, beginning with fishing, followed by a series of treatment steps, such as cutting, coloring and smoking, before ending with distribution and sale.

The initial stages focus on preparing the raw fish to obtain smoked fish. The process begins when fish are caught in the ocean and transported to a port, where they are frozen immediately to preserve freshness. Once frozen, the fish are thawed in fresh water before being cut open to remove internal parts. The fish are then soaked in a mixture of salt water and yellow coloring, likely to improve flavor and appearance. In the last step of preparation, they are smoked and made ready for packaging.

The final stages of the process involve packaging, storing, and delivering the smoked fish to consumers. After smoking, the fish is packaged and placed in cold storage to maintain its quality. It is then transported through distribution channels before reaching fish shops, where it is made available for sale to customers.

Task 2: Nowadays celebrities are more famous for their glamour and wealth than for their achievements, and this is a bad example for adolescents. To what extent do you agree or disagree?

Sample: These days, the fact that some celebrities are known for their money rather than for what they have achieved has become a hotly debated topic. In my opinion, I believe that these celebrities are bad influences for young people. Nevertheless, there are many other stars who are good examples to adolescents.

IELTS FORECAST
BY PHÁT DƯƠNG

First of all, many celebrities are well-known for their glamorous lifestyle, which does not come from hard work. These celebrities may achieve fame and wealth from their parents, partners, families, or from being scandalous. This can mislead youngsters to believe that success can be achieved through unconventional means and give them a twisted perspective on life's values. Take the Kardashians for example, they build an empire of reality shows from showing their quarrels, infidelities, and partying - which are not healthy behaviours that children should learn.

On the other hand, there are various self-made celebrities with admirable qualities and achievements that can influence young people in a positive way. These stars work their way up

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG
Mọi tài liệu được share dưới dạng PDF hoặc từ tài khoản khác sẽ không đủ đề và không chịu sự kiểm soát từ thầy.
Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

with talents, work ethics, and kind personalities. Such celebrities will inspire children to work hard and behave appropriately. For example, Keanu Reeves is an internationally famous star who is also widely known for his humble characteristic and good deeds. One of which is that he gave 70 percent of his earnings from the first "The Matrix" movie to leukemia studies. Another well-known star is Emma Watson, who became a millionaire after her role in the "Harry Potter" franchise. Despite becoming well-off at a young age, Emma never neglected her studies and even graduated from an Ivy-League school.

In conclusion, even though there are stars who exert negative influence on young people, there are several other celebrities who are exemplary to youngsters in the way they live their lives. It is crucial that children can differentiate between which celebrities to learn from.

Task 1: The table below shows information about spending on health in five different countries in 2002.

	Total	Public spending	Private spending
Japan	7.2%	5.8%	1.4%
Italy	7.7%	5.3%	2.4%
Germany	9.3%	7%	2.3%
France	11.4%	8.6%	2.8%
USA	8.6%	6%	2.6%

Sample: The provided table compares the percentage of GDP allocated to health spending across five different nations, categorized into total, public, and private sector contributions.

Overall, France emerged as the country with the highest level of investment in health, while Japan had the smallest private contribution. A dominant trend across all five nations was that public spending significantly outweighed private expenditure, with France leading in government funding and Japan showing the most minimal private contribution.

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

France exhibited the most substantial commitment to health, with a peak total expenditure of 11.4%, bolstered by the highest public sector share at 8.6%. Germany followed as the second-highest spender, allocating 9.3% in total and 7.0% from public funds. While the USA's total spending of 8.6% exceeded that of Italy (7.7%) and Japan (7.2%), there was a notable disparity in public funding between the top and bottom of the list; for instance, the public gap between France (8.6%) and Italy (5.3%) represented a significant difference of 3.3%.

In terms of private investment, France and the USA led the group with the highest shares at 2.8% and 2.6%, respectively. In stark contrast, Japan recorded the lowest private spending at a mere 1.4%, which was exactly half of the French figure. Interestingly, despite a gap in their total GDP allocation, Italy and Germany showed remarkably similar private spending levels, at 2.4% and 2.3% respectively.

Task 2: Nowadays young people are admiring media and sports stars, even though they do not set a good example. Do you think this is a positive or negative development?

Sample: In recent years, it has become increasingly common for young people to look up to media and sports celebrities, even when these public figures do not act as positive role models. While this trend can sometimes motivate youth to achieve their own goals, I believe it is ultimately a negative development because it can lead to the imitation of harmful behaviors.

On the one hand, admiring famous entertainers and athletes can have certain positive effects on young people. First, successful athletes, for instance, achieve international fame only after years of intensive training and dedication. When young fans witness these achievements, they are often inspired to work harder toward their own ambitions, which helps them develop a strong work ethic. Second, these celebrities play a major role in encouraging youth to participate in beneficial activities. Because sports stars and media figures make sports, music, and creative arts highly popular, their audience is more likely to take up these pursuits. Therefore, more young people engage in productive hobbies, which significantly enhances their personal development.

On the other hand, I believe this is a negative trend for several reasons, one of which is that impressionable teenagers often copy the destructive habits of their idols. When celebrities engage in reckless actions, such as substance abuse, public aggression, or extreme materialism,

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

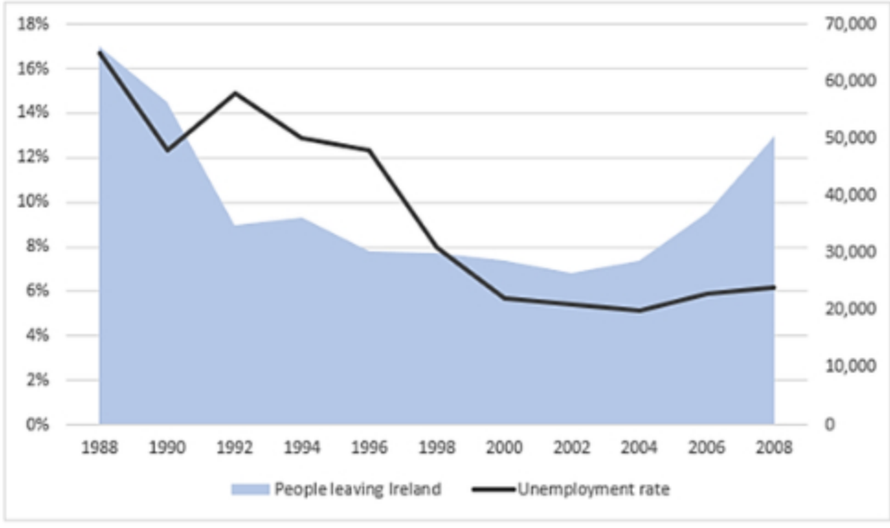
Mọi tài liệu được share dưới dạng PDF hoặc từ tài khoản khác sẽ không đủ đề và không chịu sự kiểm soát từ thầy.

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

young fans may view this behavior as acceptable or even trendy. For example, even when a famous star is involved in a serious public scandal, they often continue to receive massive attention and admiration from their followers. In addition, this obsession creates a distorted understanding of success and social values. Specifically, an excessive focus on fame and wealth can easily overshadow essential qualities like honesty, responsibility, and contributing to the community. As a result, young people begin to measure success solely by financial status, while important moral values receive less attention.

In conclusion, although admiring celebrities can motivate young people to work hard and adopt active hobbies, the tendency of young fans to imitate irresponsible behaviors and prioritize fame over core moral values shows that this phenomenon is ultimately a damaging development.

Task 1: The chart below shows the unemployment rate and the number of people leaving Ireland from 1998 to 2008.



Sample: The graph presents the proportion of unemployed citizens as well as the population migrating from Ireland between 1988 and 2008.

Overall, the unemployment rate in Ireland dropped substantially, while the number of people leaving the country fluctuated. However, during the first sixteen years, both showed general downward trends. It was after 2004 that their patterns clearly differed.

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

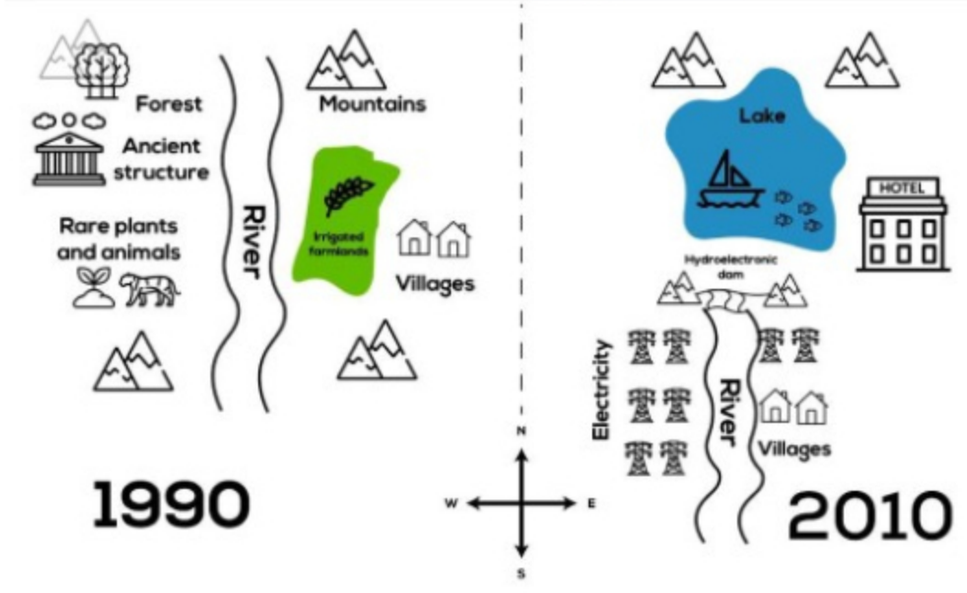
Mọi tài liệu được share dưới dạng PDF hoặc từ tài khoản khác sẽ không đủ đề và không chịu sự kiểm soát từ thầy.

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

The percentage of the Irish population who were jobless decreased quite continually, starting with a fall from 17% to 13% over the first year and another drop of 8% between 1992 and 2000, with the only exception of a marginal increase of 2% from 1990 to 1992. After 2000, the figure remained relatively stable at around 6%.

In 1988, approximately 60,000 people left Ireland, but this figure declined, like the percentage of unemployed people, almost by half until 1992. After this point, the decline slowed down (from 35,000 to 30,000) for four years and leveled off around 30,000. However, 2004–2008 saw a significant rise in emigration from below 30,000 to 50,000 people, whereas the unemployment rate stabilized during these years.

Task 1: The maps below show the changes in a town after the construction of a hydroelectric power dam.



Sample: The two maps illustrate the transformation of a river valley area between 1980 and 2000 following the construction of a hydroelectric power dam.

Overall, the area underwent significant changes, shifting from a rural valley landscape with natural and historical features to a man-made lake used for recreation and electricity generation. Key features such as forest, farmland, and wildlife habitats were lost, while new facilities like a dam, lake, and hotel were introduced.

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Mọi tài liệu được share dưới dạng PDF hoặc từ tài khoản khác sẽ không đủ đề và không chịu sự kiểm soát từ thầy.

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

In 1980, the river flowed from north to south through a narrow valley bordered by mountains on both sides. In the northern part, there was a dense forest and a set of ancient structures located near the riverbank. Further downstream, midway along the east bank, irrigated farmland occupied the land adjacent to a zone marked for rare plants and animals. Meanwhile, a small village was situated in the southeast corner, at the base of the mountains.

By 2000, significant changes had taken place. A hydroelectric dam had been constructed at the narrowest point in the southern valley, resulting in the complete flooding of the upstream area. Consequently, a large lake was formed, submerging the forest, farmland, and wildlife zones. The lake was now used for fishing, as indicated by the presence of a boat. Additionally, a hotel had been built on the eastern lakeshore, while electricity pylons were installed downstream. Despite these transformations, the original village remained intact below the dam.

Task 2: Some people say it is the government's responsibility to transport children to school, while others believe parents should transport their children to school. Discuss both views and give your opinion.

Sample: The responsibility for transporting children to school, whether it rests with individual families or the state, is a subject of considerable societal discussion. While the benefits of parental involvement in this daily routine are notable, I contend that government-provided transport is still essential.

Many advocate that parents should retain the primary charge of escorting their children to school. This perspective is rooted in the belief that personally managing school transport keeps parents more intrinsically involved in their children's daily routines. Consequently, this closer supervision is thought to enhance safety awareness and strengthen emotional bonding within the family unit. Furthermore, parental transport affords greater flexibility and independence from public systems. This is because parents can select convenient travel times and routes, adapting to their own work schedules or unexpected changes. In suburban areas, for example, where schools may be nearby, families using private cars or bicycles can adjust departure times to avoid heavy traffic, thus preventing lateness without depending on fixed public bus timetables.

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Mọi tài liệu được share dưới dạng PDF hoặc từ tài khoản khác sẽ không đủ đề và không chịu sự kiểm soát từ thầy.

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

Conversely, I am highly convinced that school transport provided by the government is integral to ensuring equality and safety for all students. Regarding the former, publicly funded transport ensures that children from remote or low-income areas can attend school regularly. As a result, this intervention directly reduces absenteeism and mitigates educational inequality. Finland, for instance, provides free school buses serving rural regions, ensuring students who live far from schools arrive safely and punctually, thereby guaranteeing equal access regardless of geography. Another notable benefit is that this policy enhances public safety and environmental efficiency. This stems from the fact that organized school buses significantly reduce traffic congestion around educational institutions and lower accident risks, which leads to safer streets and a corresponding decrease in carbon emissions.

In conclusion, although direct parental responsibility for school transport offers benefits in flexibility and family involvement, I would maintain that the provision of a state-funded system is a superior approach. It is crucial for upholding educational equity and ensuring the collective safety and environmental well-being of the community.

Task 1: The graph below shows a typical American and a Japanese office.

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

Sample: The visual comparison illustrates two distinct office setups: the traditional Japanese office and the contemporary American office.

Overall, Japanese offices typically embrace an open-plan layout, with no private rooms and a preference for communal workspaces. In contrast, American offices tend to follow a more traditional layout, featuring a higher proportion of private offices and cubicles.

Regarding Japanese offices, private rooms are usually absent, and departments are often grouped together. These offices adhere to a hierarchical structure, positioning the department manager centrally, flanked by two section managers within their respective teams. The workspace consists of expansive communal tables with chairs lined up on each side, promoting direct interaction among employees. Windows are only situated behind the department managers, while the rest of the office lacks windows.

Conversely, American-style offices feature an open space at the center, furnished with L-shaped tables and chairs designated for individual employees. On one side, each manager occupies a private room, with the department manager having the largest one. On the opposite side, there are additional facilities such as a copy room, storage space, and two conference rooms, amenities notably absent in Japanese offices. Windows are installed on both sides of these American offices.

Task 2: In some cities, people are choosing cars instead of bicycles, while in other cities riding bikes is replacing cars. Why is this the case? Which development do you think is better?

IELTS FORECAST
BY PHÁT DƯƠNG

Sample: In modern society, the preference for transportation modes varies significantly between cities. While some urban areas are witnessing a rise in car usage, others are witnessing a decline in automobile transportation, with bicycles gaining popularity. This phenomenon can be ascribed to a number of reasons, and I believe the shift towards bicycle usage is the more desirable option.

The chief reason why cars are replacing bicycles in some cities is the lack of adequate bicycle infrastructure. Without proper bike lanes or roads designed to accommodate bicycles, people may feel unsafe cycling alongside traffic or on poorly-maintained surfaces. As a result, these cities may see higher rates of car usage than cycling. On the other hand, cities that promote

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG
Mọi tài liệu được share dưới dạng PDF hoặc từ tài khoản khác sẽ không đủ đề và không chịu sự kiểm soát từ thầy.
Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

cycling have heavily invested in cycling infrastructure, such as bike lanes and dedicated paths. These improvements make cycling safer and more accessible, encouraging more people to cycle. For example, Copenhagen, Denmark has established an extensive network of bike lanes and implemented traffic lights that prioritize cyclists. As a result, the majority of Copenhagen's residents now cycle to work or school, making cycling the most popular mode of transportation in the city.

I am convinced that people's inclination towards bicycles over cars is a better development. Cycling is a more environmentally friendly option than using cars, as it does not contribute to air pollution and reduces carbon emissions. Secondly, cycling is a healthier option, as it provides physical exercise, which can help prevent chronic diseases such as obesity and cardiovascular diseases.

In conclusion, the trend of choosing cars over bicycles or vice versa in different cities is primarily influenced by their investment in bicycle infrastructure. However, promoting cycling as a mode of transportation in cities is a more beneficial development, as it aligns with global efforts to reduce carbon emissions and improve public health.

Task 1: The graph below shows the information about medical care in three European countries between 1980 and 2000.

		1980	1990	2000
Physicians (per 1000 people)	Austria	0.8	0.9	1
	France	2.4	2.2	1.3
	Sweden	3.6	3	3.8
Hospital beds (per 1000 people)	Austria	1.4	3.1	3.7
	France	0.2	0.8	1.6
	Sweden	6.4	6.4	6.9
Average stay in hospitals	Austria	18	6	18
	France	9	7	5
	Sweden	23	18	21

Sample: The table provides data on three aspects of medical care—number of physicians, hospital beds per 1,000 people, and average hospital stay—in Austria, France, and Sweden from 1980 to 2000.

Overall, the number of physicians rose in Austria and Sweden but declined in France. The availability of hospital beds increased across all three countries. In contrast, the average length of hospital stay decreased in France, while the figures for Austria and Sweden fluctuated.

In terms of medical personnel, Austria showed a gradual rise in physician numbers from 0.8 per 1,000 people in 1980 to 1.0 in 2000. Sweden also experienced a recovery after a dip, beginning at 3.6 in 1980, dropping to 3.0 in 1990, and then rising to 3.8 by 2000. In contrast, France experienced a steady decline over the period, falling from 2.4 to 1.3 per 1,000 people.

The number of hospital beds saw consistent growth in all three nations. Austria increased from 1.4 to 3.7 beds per 1,000 people, while France progressed from just 0.2 in 1980 to 1.6 in 2000. Sweden maintained a relatively high and stable number of beds, rising slightly from 6.4 to 6.9 over the same period.

Regarding the average hospital stay, France saw a steady decline from 9 days in 1980 to just 5 in 2000. Austria recorded a sharp drop from 18 days to 6 in 1990, before increasing slightly to 8 days in 2000. Similarly, Sweden's figures fell from 23 days in 1980 to 18 in 1990, then climbed again to 21 days by the end of the period.

Task 2: Some people think the money spent on developing the technology for space exploration is not justified. There are more beneficial ways to spend this money. To what extent do you agree or disagree?

LUYỆN FORECAST
BY PHAT DUONG

Sample: The allocation of vast sums of public money towards developing technology for space exploration is often met with skepticism, particularly when pressing global issues like poverty and disease remain unresolved. While I acknowledge the urgency of addressing terrestrial problems, I firmly disagree that spending on space technology is unjustified, as its long-term benefits and technological spin-offs are indispensable for human progress.

First and foremost, critics rightly point out that the financial resources dedicated to space programmes could be immediately redirected to alleviate human suffering. The argument holds

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG
Mọi tài liệu được share dưới dạng PDF hoặc từ tài khoản khác sẽ không đủ đề và không chịu sự kiểm soát từ thầy.
Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

that millions spent on launching a single satellite could be used instead to fund sustainable food programs, provide clean water infrastructure, or accelerate research into endemic diseases. From a purely ethical standpoint, this immediate humanitarian need often seems to supersede the abstract goals of extraterrestrial discovery.

Nevertheless, restricting space exploration would be shortsighted, as its advancements yield benefits that are central to modern life. Much of the technology we take for granted today, including satellite communication, GPS navigation, and advanced medical imaging, originated from aerospace research. Moreover, space technology is paramount for tackling the very environmental crises that concern the critics. Satellites provide crucial data for climate monitoring, disaster prediction, and resource management on a global scale. This indispensable perspective from orbit helps humanity protect its home planet.

In conclusion, I firmly believe that the investment in space technology is not only justified but is fundamentally necessary. It should not be viewed as a luxury but as a strategic investment that drives unparalleled innovation and ensures the long-term survival and advancement of our civilization. Therefore, funding for space exploration must continue alongside parallel efforts to resolve existing global challenges.

Task 1: The graph shows the percentage of visiting the cinema once a month or more between 1984 and 2003 (4 age groups).

Mọi tài liệu được share dưới dạng PDF hoặc từ tài khoản khác sẽ không đủ đề và không chịu sự kiểm soát từ thầy.

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

Sample: The line graph illustrates the percentages of individuals visiting the cinema once a month or more across four age groups from 1984 to 2003.

Overall, the trends show fluctuating patterns in cinema attendance among different age groups over the 19-year period.

The 15-24 age group exhibited the highest percentages throughout the period, starting at around 40% in 1984, reaching a peak of approximately 58% in 1998, and then slightly declining to about 54% by 2003. On the other hand, the 7-14 age group began at a lower rate of around 10% in 1984, experienced a significant increase to about 30% by 1998, before dropping to approximately 24% in 2003.

In contrast, the 25-35 age group started at approximately 15% in 1984, saw a gradual rise to around 28% in 2000, and decreased slightly to about 22% by 2003. Lastly, the 35 and over age group had the lowest initial rate of around 5% in 1984, peaked at about 10% in 2000, and ended the period at approximately 8% in 2003.

Task 2: Nowadays, more and more older people who need employment compete with the younger people for the same jobs. What problems does this cause? What are the solutions?

Sample: The competition between older and younger people for the same jobs has become increasingly common in today's job market. While this situation can create a number of problems, solutions exist to address the concerns from both of these age groups.

Clearly, this competition can cause a lot of headache for the parties involved. Firstly, job security for the older group may be threatened especially in careers that are more labor intensive, as employers may perceive a young candidate as more energetic and favor them to replace an older staff member as a result. This is even more likely if an older employee has spent years at the job without being promoted to a higher position. Meanwhile, young jobseekers have to face a higher entry barrier for employment. Every year, university and high school graduates compete among themselves for jobs, and with this reality, their competitors would include people who undoubtedly possess more experience as well. This puts the younger generation's lives under pressure and would end up limiting their access to good employment opportunities.

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

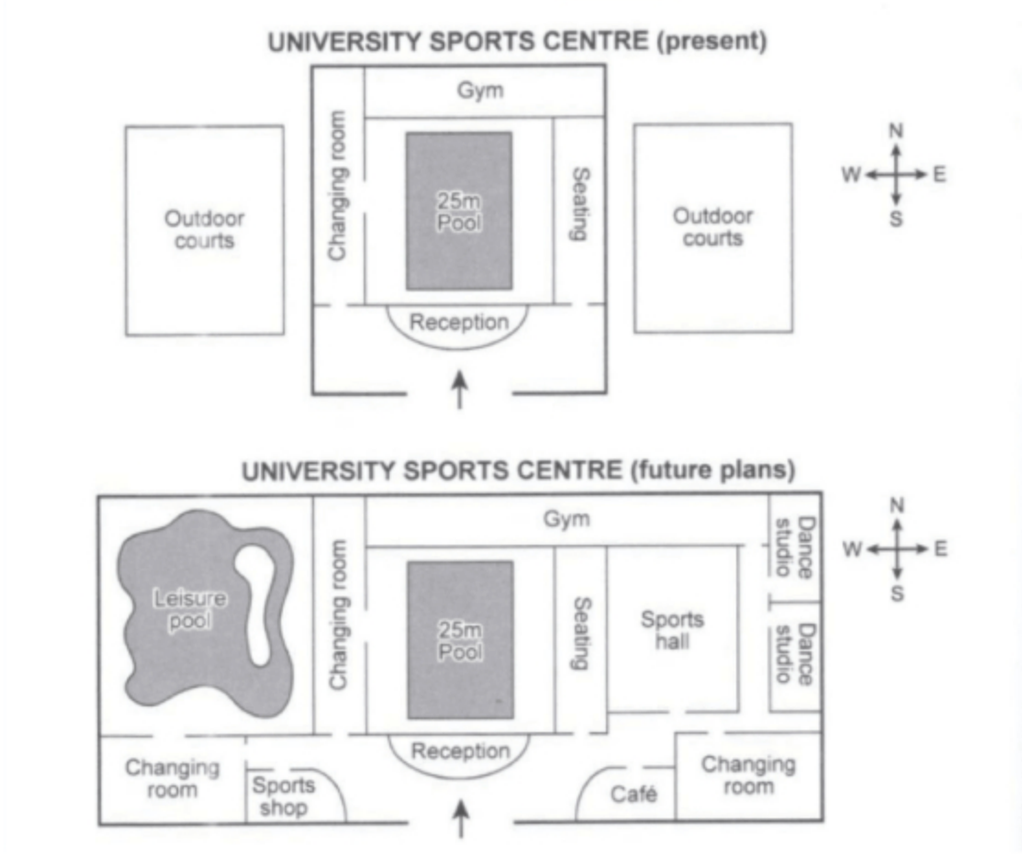
Mọi tài liệu được share dưới dạng PDF hoặc từ tài khoản khác sẽ không đủ đề và không chịu sự kiểm soát từ thầy.

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

Several measures can be implemented to resolve the aforementioned issues, fortunately. Employers, initially, should adopt policies of additional job security for older staff, in some form of program for older workers to mentor their younger counterparts. The employees, as a result, will have more opportunities to contribute at the workplace, and be less likely to feel that their livelihood is under threat. With regard to the youth, they should be encouraged to shore up their employable skills, such as leadership and communication. Taking part in extracurricular activities where they could volunteer for responsibility is usually the first step to honing these qualities. They would, as a result, stand out amidst the fierce competition in the job market.

In conclusion, the fact that older and younger people contest each other for employment certainly causes problems for both age groups. In my opinion, it is imperative to consider solutions for these issues, to ensure that all age groups have fair access to job opportunities.

Task 1: The picture shows the map of a University Sports centre in 2007 and at present.



TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Mọi tài liệu được share dưới dạng PDF hoặc từ tài khoản khác sẽ không đủ đề và không chịu sự kiểm soát từ thầy.

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

Sample: The comparison between the current layout and the proposed changes of a university's sports center is depicted in the two maps.

In general, there are significant expansions planned for the sports center, extending towards the east and west. This expansion aims to provide additional amenities, thereby diversifying the range of recreational activities available to users.

Currently, upon entering the sports center through the main entrance located in the south, visitors encounter a reception area directly opposite. The central area of the center features a 25-meter-long swimming pool, accompanied by a seating area to the east and a changing room to the west. Adjacent to the pool area is a gymnasium, with outdoor courts situated on either side of the main building.

Looking ahead, the proposed changes largely maintain the existing facilities, with notable alterations including the expansion of the gymnasium towards the east and the removal of outdoor courts. On the right side of the entrance, the redevelopment plan introduces the addition of a cafe and an additional changing room. Further eastward, a sports hall and two dance studios are slated for construction. In the opposite direction, a sports shop is set to be established, along with another adjacent changing room. A prominent feature of the revised layout is the introduction of a leisure pool, significantly larger than the existing indoor pool, demonstrating a concerted effort to enhance recreational offerings.

Task 2: Some people think that the government has the duty to ensure citizens have a healthy diet, while others argue it is the responsibility of each individual. Discuss both views and give your opinion.

IELTS FORECAST
BY PHAT DUONG

Sample: A number of people believe that maintaining a healthy diet for the public is the government's task while some are convinced that it should fall on the shoulders of each citizen. This essay will evaluate both viewpoints before delivering my own perspective.

On the one hand, some people advocate that the government should bear the responsibility to make sure residents adhere to a balanced diet. This is due to the fact that they believe the state possesses far-reaching authority, which will help them enforce effective dietary regulations. For example, government officials could impose a heavier tariff on junk food to incentivize the

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG
Mọi tài liệu được share dưới dạng PDF hoặc từ tài khoản khác sẽ không đủ đề và không chịu sự kiểm soát từ thầy.
Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

consumers to pick healthier options. Furthermore, by enhancing public health, the government could simultaneously yield benefits for other sectors of society. As the physical well-being of workers is directly linked to their output, a healthier population could lead to significant economic gains as well as less strain being put on health services. Thus, government-led initiatives could significantly improve public well-being and contribute to great economic growth.

However, there are other people who contend that individuals reserve the right to regulate their own dietary practices. The main rationale for this is that deciding what to consume is a fundamental human right. Therefore, imposing strict dietary guidelines could infringe upon personal freedom, which could engender discontent and resentment among the population. In addition, reactions to certain types of food tend to vary from person to person due to differences in several factors, from pathological conditions to belief systems and personal preferences. For instance, someone with a severe nut allergy cannot switch to a plant-based diet rich in nuts, regardless of being deemed healthier. This makes a universal dietary approach impractical.

In conclusion, while the government's involvement could bear some merits, I would say that it is ultimately the responsibility of the people themselves to maintain a healthy diet. However, the authorities can still play a supportive role by educating the public to encourage healthier lifestyles without restricting personal freedoms.

Task 1: The diagram below illustrates the process of producing drinking water using a solar-powered water pump and water filter.

Sample: The diagram illustrates a six-step process by which solar energy is used to generate clean drinking water from an underground well.

Overall, the entire system comprises six distinct stages, beginning with the generation of solar energy and culminating in the provision of filtered, drinkable water.

In the initial stage, solar radiation is absorbed by a photovoltaic panel, which captures the sunlight and transfers the energy to a converter. This converter plays a crucial role in transforming solar energy into electrical power. The electricity produced is then supplied to a pump installed within an underground well. As the pump becomes activated, it draws water from beneath the ground and channels it upwards to begin the purification process.

After the water is brought to the surface, it is directed into a storage tank positioned on a raised wooden platform. Within this elevated tank, the water undergoes filtration through an integrated system that removes impurities and contaminants. In the final stage, the purified water is dispensed through a tap, allowing it to be collected in a portable container, ready for safe and convenient consumption.

Task 2: In some countries, celebrities complain about the way the media publicize their private lives. Some people say that they should accept it as part of their fame. To what extent do you agree or disagree?

Sample: The media's extensive coverage of celebrities' private lives has long been a subject of public debate. While some people argue that famous individuals should accept such attention as an inevitable consequence of their popularity, I disagree with this view because public interest should have reasonable limits and celebrities remain entitled to privacy.

Those who believe that public figures should tolerate media scrutiny may have several arguments. They may well argue that celebrities influence public attitudes and purchasing decisions, thereby creating legitimate public curiosity about their lives. For example, when actors or musicians promote products or advocate social causes, many people expect them to demonstrate consistency between their public image and personal conduct. Nevertheless, this argument does not justify unrestricted intrusion into their private affairs. This is because details regarding family relationships, romantic lives, or personal struggles are often unrelated to their professional responsibilities and therefore should remain beyond the reach of sensational media coverage.

In my opinion, celebrities should not be expected to sacrifice their privacy simply because they are well known. Chief among the reasons is that the right to privacy is a fundamental human right that should not disappear as a result of fame. Constant surveillance by photographers and reporters can place considerable psychological pressure on public figures, thereby diminishing their overall well-being. Another point worth mentioning is that the media should prioritize responsible journalism over commercial gain. Rather than exploiting private scandals to attract audiences, news organizations should focus on celebrities' professional achievements and contributions to society. Doing so can still satisfy the public's interest while fostering a healthier media environment based on respect and ethical reporting.

In conclusion, although celebrities should expect a certain level of public attention because of their influence, I firmly disagree that they must accept excessive media intrusion into their

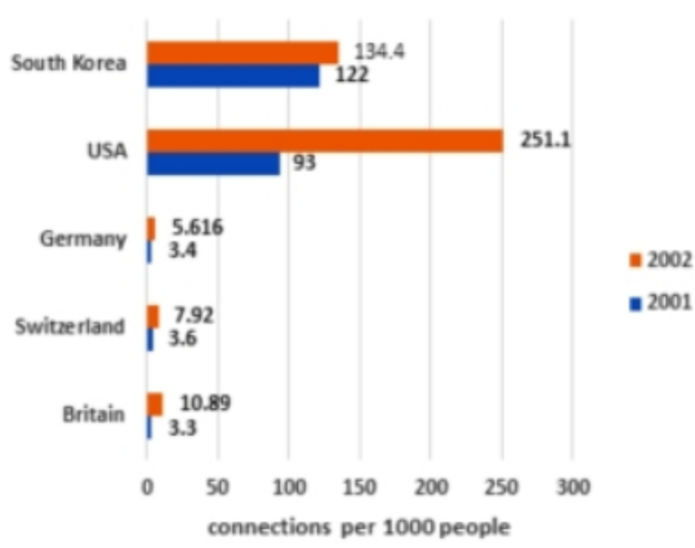
private lives. Respecting personal privacy while encouraging responsible journalism is a far more balanced approach.

Task 1: The chart below gives information about the high-speed continuous Internet connection of households in five countries in 2001 and 2002.

Country	Percentage change
South Korea	+20
USA	+170
Germany	+80
Switzerland	+120
Britain	+230



Sample: The chart sheds light on the high-speed internet connectivity of households in five different nations over the course of two years.

Overall, it can be seen that by 2002, the US had the highest average of internet connected households, while Germany had the lowest. Furthermore, over the two consecutive years, Britain experienced the greatest percentage change in internet connections per household, while South Korea had the smallest fluctuation.

In 2001, South Korea had the most high speed internet connected households , at 122 per 1000 people, while the United States ranked second at 93 connections. High speed internet connections were much less common for Britain, Switzerland and Germany at 3.3, 3.6 and 3.4 per 1000 people respectively.

Over the course of the next year, the number of families with high speed connections in the US climbed by 170 percent to 251.1 connections per 1000 people, almost double that of South Korea in the same year. Meanwhile, despite experiencing a 230 percent surge, only 10.89 per 1000

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

people in Britain had high speed internet access by 2002. Nonetheless, this was higher than the figures for Germany and Switzerland, who only managed 5.616 and 7.92 per 1000 people respectively.

Task 2: Some think that young people should be free to choose any career they like, while others say that they should be more realistic about their future. Discuss both views and give your own opinion.

Sample: Some individuals claim that youngsters should be given the freedom to choose the occupation they want, while others believe that it is better for them to prioritize practicality and be realistic about their future. While both views hold merits, I am more inclined toward the former opinion.

Admittedly, there are reasons why many people believe that careful cognizance of the young about their future is necessary. Since people at such young ages are mostly inexperienced, their wanted career paths are more prone to be risky and bold, functioning as a way that they could express themselves freely. As a result, many of them choose to be singers, artists, or other jobs that are considered unsustainable, potentially leading to an inconsistent financial state that can cause them a suffering life even when they can live with their passion. Therefore, thinking clearly about their future life and choosing a safe path would ensure their living condition in the long run. Additionally, in many cases, the career path young people are at the moment passionate about, can turn out to be not as intriguing as they thought before, For instance, students of various disciplines in universities and colleges have to drop out, or continue their schooling but then work in a whole different industry as they are unsuitable of following these majors.

However, I believe allowing young people to follow their passion can bring about more significant benefits. Primarily, choosing their wanted career path would be beneficial for their mental well-being. This is predicated on the assumption that choosing an unwanted job could make people at young ages feel invaluable as it is opposite to their wish, and they cannot handle it properly due to their inexperience. Eventually, those people are more likely to resort to negative feelings, which could cause mental issues such as isolation or even depression. Moreover, encouraging young individuals to pursue what they are interested in could result in

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

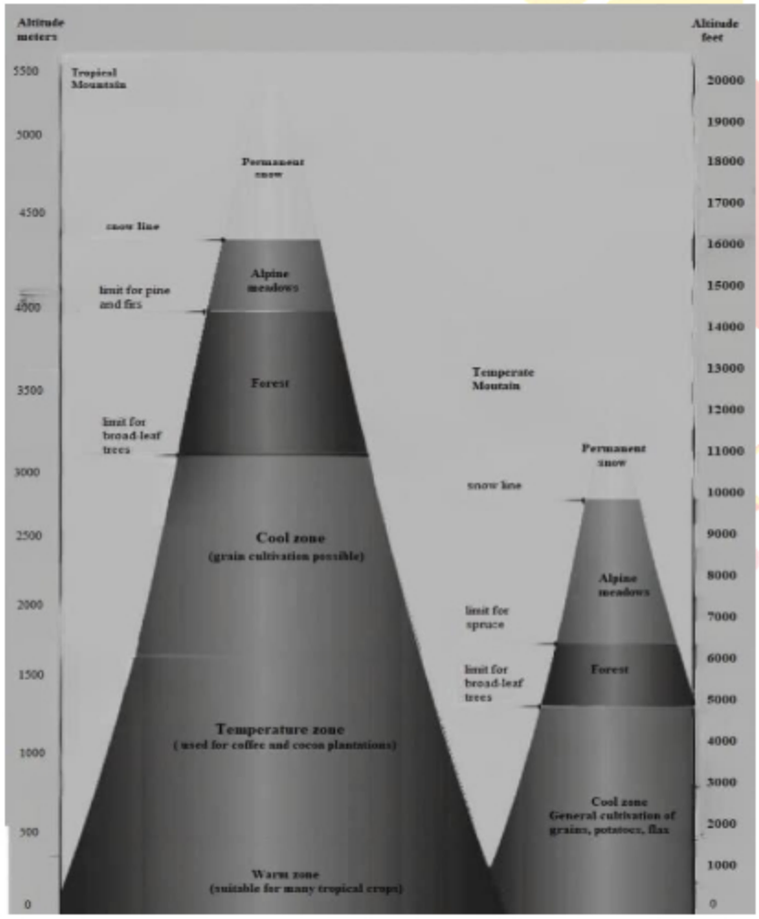
success in these fields, ultimately making their lives fulfilling. This can be seen in the case of Bill Gates, one of the wealthiest people in the world. Despite having an ensured career path to follow in tertiary education, he ended up making a bold decision to leave Cambridge University to establish his own company, which at that time was not thought to be lucrative. This decision then led to the establishment of Microsoft, and Bill Gates not only enriched himself but also created technologies that changed the entire world.

In conclusion, while it is thought to be risky to let young people pursue their wanted jobs, as it could give them a financial burden and a tough life in the future, it is more advantageous to incentivize them to do so since it can benefit them mentally and possibly result in great success.

Task 1: The diagram shows differences in temperature zones between tropical mountains and temperate mountains.



TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Sample: The given diagram illustrates the distribution of vegetation in mountains of tropical and temperate regions.

It is evident that tropical mountains have a much greater height as compared to temperate mountains. Moreover, tropical mountains exhibit a wider range of temperature zones while temperate mountains mainly consist of cool zones and alpine meadows.

In terms of tropical mountains, they are extremely tall, measuring approximately 5,500 meters in height and can be divided into six distinctive regions. The warm zone, situated at an altitude of below 510 meters, is characterized by the growth of tropical plants. The temperate zone, located at a higher altitude, is suitable for growing crops like coffee and cocoa. Grains are grown in a cool zone, which lies at a height of approximately 2,000 to 3,000 meters above sea level. Above this zone is the forest region, where broadleaf trees can survive until an altitude of 3,000 meters, whereas pine and firs can thrive up to 4,000 meters. The alpine meadows and the permanent snow area are situated at the top of these mountains, with the snow line at around 4,400 meters.

As for temperate mountains, they are divided into four distinct regions. The cool zone, which is below 5,000 feet (about 1,500 meters) in altitude, is favorable for crops such as grains, potatoes, and flax. The forest region lies between the limits for broadleaf trees and spruce trees, which are under 5,000 and 6,000 feet, respectively. Alpine meadows are situated at a higher altitude. The peak of these mountains is approximately 3,400 meters, and it remains covered with snow throughout the year, with the snow line at around 2,700 meters above sea level.

Task 2: Some people think that it is best to live in a horizontal city while others think of a vertical city. Discuss both views and give your opinion.

Sample: In recent years, the debate between whether living in a horizontal or vertical city is more desirable has gained traction. Some people argue that horizontal cities, where buildings are lower and more spread out, offer a better quality of life, while others believe that vertical cities, characterized by tall skyscrapers, are more efficient. This essay will discuss both viewpoints and present my opinion on the matter.

On the one hand, proponents of horizontal cities believe that they provide a more comfortable and spacious living environment. In horizontal cities, people tend to live in houses rather than

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

apartments, which allows for more privacy and space. With larger land areas available for construction, families can have backyards, gardens, and more open spaces to enjoy. Moreover, horizontal cities tend to feel less crowded and offer a better connection to nature. For example, cities like Los Angeles in the United States or Melbourne in Australia are known for their wide streets, low-rise homes, and abundant green spaces, which give residents a sense of tranquility and personal space.

On the other hand, vertical cities are praised for their ability to maximize space, especially in densely populated urban areas. In cities where land is limited, such as Hong Kong or New York, building upwards allows for a more efficient use of space. High-rise buildings can accommodate thousands of people in a relatively small footprint, which is essential in cities with high population densities. Additionally, vertical cities often feature multi-purpose skyscrapers, where people can live, work, shop, and even exercise within the same building, making them highly convenient and efficient. This reduces the need for commuting, saving both time and energy.

In my opinion, as the global population continues to rise and urbanization accelerates, vertical cities present a more sustainable solution. While horizontal cities may offer a more relaxed lifestyle, they are not practical in the long term due to the increasing demand for land and resources. Vertical cities, with their compact design, can support a growing population while minimizing the environmental impact of urban sprawl. Furthermore, vertical living often comes with modern amenities that improve the overall quality of life, such as gyms, shopping centers, and green rooftops, all integrated into the same space.

ILETS FORECAST
BY PHAT DUONG

In conclusion, both horizontal and vertical cities have their own merits. However, given the current trends in urbanization and the need for more efficient use of space, I believe that vertical cities will be the way forward for future urban planning.

Task 1: The diagram below shows the development of cutting tools in the Stone Age.

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Sample: The illustration details the evolution of stone cutting tools used by prehistoric men in the Stone Age.

As is evident from the diagram, the key difference between the cutting tools in the two periods is the size, with the latter version becoming noticeably larger. Tool B also appears more refined than tool A in terms of shape and sharpness.

1.4 million years ago, the cutting tool was thin, measured 7-8 centimeters in length, and did not display much craftsmanship. They were also rather uneven in appearance: the front and the back were shaped differently, and the surface appears to have been quite rough.

600,000 years later, it is obvious that the cutting tools used by man in the Stone Age had become significantly more advanced. First of all, they were larger, measuring 10-11 centimeters in length, and had a more definite tear-drop shape: fat at the base and tapering aggressively toward a sharp tip whereas the prior versions tended to be obtuse. Second, both front and back sides were ground more evenly and smoothly. It would also seem that man had learnt to sharpen the sides of their cutting tools as well.

Task 1: The diagrams below give information about two road tunnels in two Australian cities.

Sample: The diagrams compare the design of two different tunnels in two cities in Australia. Overall, the tunnels differ in architectural features and are suitable for different types of geographical conditions. It is also evident that Tunnel B has a higher traffic capacity and received more financial investment compared to Tunnel A.

Looking at the first chart, it is clear that Tunnel A was built under the water, with a total investment of $556 million over the course of five years between 1987 and 1992. The structure spans 2.2 kilometers in length with a depth of 25 meters below the ground level. To shield the passage from the water, a heavy layer of stone and sand was placed above the tunnel, acting as a water barrier. A closer look reveals that the tunnel consists of twin tubes, allowing two lanes of vehicles to travel through.

Tunnel B, on the other hand, has larger dimensions and almost cost twice the investment of Tunnel A with $1.1 billion. The tunnel was constructed 35 meters underground over a relatively shorter time (2004-2007). Tunnel B, which is 3.6 kilometers long, also features twin tubes. However, Tunnel B is broader than Tunnel A as it provides sufficient space for three lanes of vehicles.

Task 2: In many parts of the world, children and teenagers are committing more crimes. Why is this happening? How should children or teenagers be punished?

Sample: Cases of juvenile delinquency are increasing in many areas worldwide. In my opinion, this phenomenon could be attributed to a number of external factors. Punishment for offenders should be imposed according to the seriousness of the crime, and imprisonment should be reserved solely for extreme cases.

The main causes of juvenile crime are related to social background. To explain, many young offenders reside in impoverished areas without access to basic necessities or employment. Consequently, said children would have to resort to crimes such as mugging for basic survival and subsistence. Furthermore, youngsters from dysfunctional families could experience an absence of moral guidance and supervision from their parents due to negligence. This means that they would be unable to distinguish between good and bad, causing them to commit crimes without being aware of the illegal and immoral nature or the consequences of their actions.

The punishment for young delinquents ought to vary based on the gravity of the offense. To elaborate, when dealing with minor misdemeanors and petty crimes, a fine or warning could be imposed, accompanied by community work, such as cleaning up public spaces or assisting the elderly. For more serious offenses, other measures such as therapy or rehabilitation ought to be implemented to reform delinquents into responsible and law-abiding citizens. Finally, as they tend to exacerbate the problem, severe punishments such as prison sentences should be reserved as a last resort, imposed when other measures have failed.

In conclusion, I contend that several social factors are responsible for the rise of juvenile crime and that punishment should take into account the crime itself. The level of punishment needs to be appropriate to the severity of the crime, and harsh punishments such as incarceration should only be carried out for serious crimes when no other option is effective or viable.

Task 1: The pie charts below show the percentage of US music album sales by genre in 2008, 2009, and 2010.

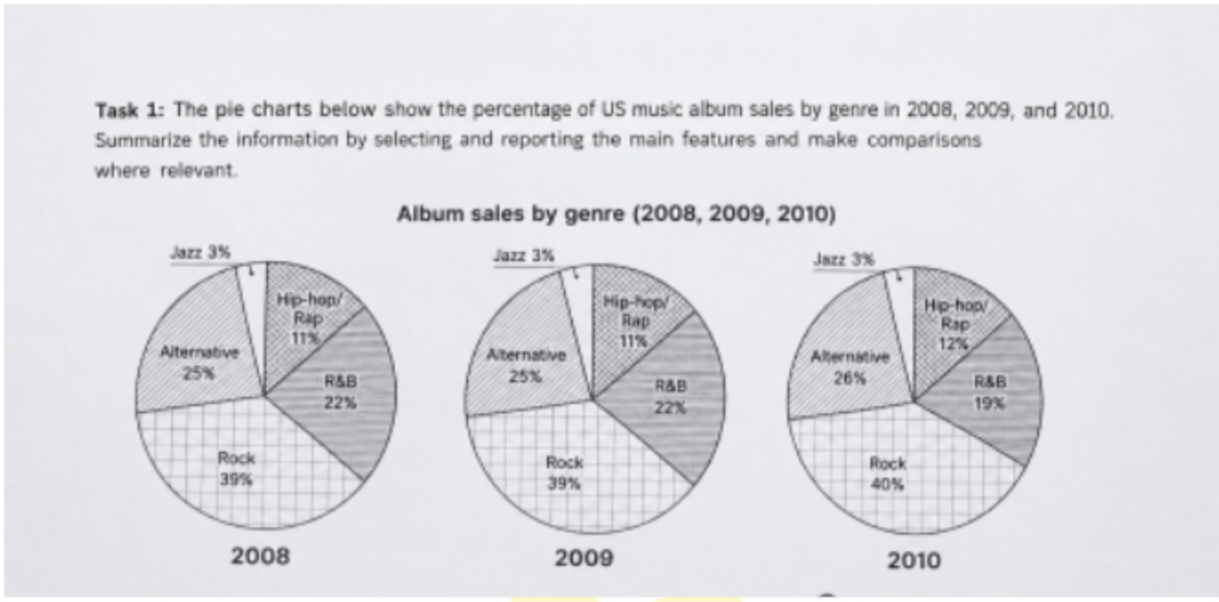
Task 1: The pie charts below show the percentage of US music album sales by genre in 2008, 2009, and 2010. Summarize the information by selecting and reporting the main features and make comparisons where relevant.



Sample: The pie charts illustrate the proportion of US music album revenues across five different genres, including alternative, rock, R&B, country, and jazz, over a three year period from 2008 to 2010.

Overall, rock dominated total music album sales throughout the period, while jazz consistently accounted for the smallest share. Additionally, country and rock music experienced overall growth in sales, whereas R&B and alternative music underwent a decline.

Looking at the growing categories, rock generated the highest share of revenue on the chart, holding steady at 39% from 2008 to 2009 before rising slightly to 40% in 2010. Country music underwent the most significant change, increasing by 3% between 2008 and 2009 to reach 16%, and then growing further to hit 18% in 2010, which represented an overall 5% rise in revenue. Conversely, the percentage for R&B dipped moderately over the timeframe, starting at 22% in 2008 and finishing at 19% in 2010. Similarly, the proportion for alternative music dropped by 3% from 23% in 2008 down to 20% in 2009, where it remained in 2010. Finally, jazz was the only genre to stay completely unchanged, hovering at 3% throughout the entire period.

Task 2: Some countries have introduced laws to limit working hours for employees. Why are these laws introduced? Do you think they are a positive or negative development?

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Mọi tài liệu được share dưới dạng PDF hoặc từ tài khoản khác sẽ không đủ đề và không chịu sự kiểm soát từ thầy.

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

Sample: Recently, some countries have brought in laws to limit working hours. I think this decision comes from wanting to protect employees' health and rights, and it is a beneficial one in many ways.

Firstly, from my understanding, I think this development stems from wanting to improve workers' health, especially if they're working in an office environment. Many office workers suffer from health problems such as back and neck pains, migraines, and sleep deprivation. Overworking seems to be the common cause of these problems. By restricting working hours, employees have more time to rest, thus improving their health. Another reason why I think countries introduce this law is to protect employees from being abused by employers. For example, it is common nowadays that marketing agency employees are expected to not leave until meeting their deadlines, which means they work overtime without getting paid.

Regardless of the reason, I think that this is something to be encouraged. Firstly, limiting working hours will help improve employees' moods as they do not have to overwork anymore. As a result, the relationship between corporate and employees improves, leading to a warmer cooperation attitude. Secondly, although it may come as a surprise, there have been studies showing that productivity is boosted by limiting working hours. These studies point out that working shorter shifts will help employees stay more focused as it does not take as much a toll on workers' physical and mental health, hence improving productivity for the whole workplace. This is especially true for factory workers, as repetitive motions can cause drowsiness, so limiting working hours keeps their minds sharper.

In conclusion, I understand that countries introduced this law to limit working hours to protect employees' rights and health. I think this is a beneficial development that needs to be encouraged in many more countries.

Task 1: The table below gives information about students studying in six departments in an Australian university in 2011.

Department	Females	First language not English	Born outside Australia
English	72%	12%	20%
Modern Languages	68%	16%	23%
History	52%	45%	31%
Physics	56%	38%	56%
Math	17%	49%	56%
Chemistry	15%	42%	48%

Sample: The table illustrates the percentage of students who pursued education at a particular university in Australia in 2009. It presents data for six different departments, categorized by gender, first language, and place of birth.

Overall, female students outnumbered their male counterparts in humanities, while the opposite trend was observed in STEM-related fields. Notably, the percentage of students whose first language was not English was under 50% across all six departments. This pattern also holds true for the proportion of foreign-born students, with the exception of modern languages.

Regarding the percentage of female learners, English led with 67%, closely followed by modern languages and history, at 65% and 58% respectively. In contrast, the remaining subjects had considerably lower female enrollment, varying from 29% to 42%.

Concerning those whose mother tongue was not English, modern languages had the highest percentage of such students, at 41%, nearly triple the figure for English and quadruple that for history. For the other departments, percentages varied slightly, ranging from 32% to 38%.

Looking at where students were born, slightly over half students enrolled in modern languages were born outside of Australia. The figures for the remaining departments were generally under 50%, with history having the lowest percentage at 18%.

Task 2: Some people think history has nothing or little to tell us, but others think that studying the past history can help us better understand the present. Please discuss the two views and give your own opinion.

Sample: While some individuals contend that the relevance of history has been eclipsed by the rapid evolution of the modern world, others maintain that the past serves as an indispensable lens through which to interpret the present. This essay argues that while the digital age presents unprecedented challenges, the study of history remains vital.

Critics of historical study often point to the chasm between ancestral lifestyles and our current globalized, tech-centric reality. Specifically, the advent of digital technology and the acceleration of globalization have fundamentally restructured how societies function, rendering many historical precedents seemingly obsolete. As a result, because the specific socio-economic conditions of previous centuries no longer exist, traditional solutions are often viewed as inapplicable to the complexities of the twenty-first century. Furthermore, there is a burgeoning emphasis on future-oriented disciplines, such as information technology and business management, which offer more tangible career trajectories. Consequently, in an increasingly competitive professional landscape, many students prioritize pragmatic skills over the perceived abstraction of historical knowledge.

However, I believe that dismissing the past is a profound oversight, as history provides the essential blueprint for understanding modern geopolitical and social frameworks. Notably, many contemporary international conflicts and systemic inequalities are deeply rooted in historical events; for instance, the legacy of colonialism continues to dictate the economic and political disparities observed in various developing nations today. Moreover, analyzing past failures allows modern societies to avoid catastrophic repetitions of previous errors. A salient example is the aftermath of the Second World War, which catalyzed the creation of international organizations designed to curb the extreme nationalism that had previously devastated the globe. Crucially, these historical lessons provide the collective wisdom necessary for governments to make informed, prudent decisions in the present day.

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

other. To accommodate these new facilities, the existing houses and much of the surrounding greenery will be cleared.

The rear section currently follows a similar layout, consisting of more four-bedroom houses bordered by trees. Under the proposed plan, this part of the estate will be reorganised around a central flower garden enclosed by a newly designed loop of private road. The original houses will be replaced by a variety of one-, two- and three-bedroom homes surrounding the garden, while a large parking area will be constructed at the back of the estate. As in the front section, many of the existing trees will be removed to make way for the new development.

Task 2: Every day, millions of tons of food are wasted all over the world. Why do you think this is happening? And how can we solve this problem?

Sample: The increasing amount of food waste the world over has become a grave problem that needs to be addressed urgently. While there are a host of reasons contributing to this issue, I believe that there are a great number of feasible solutions to tackle it.

The growing amount of discarded food can be ascribed to the devaluation of food items, which roots from the improving living standards. Nowadays, food is not a rarity but rather something that exists in abundance in many countries, especially in developed ones. The proliferation of consumerism has led to a surplus of foodstuffs, which means that people do not see it as a survival necessity but as a form of entertainment. Old money and new money alike buy food without thinking about its use and their food consumption rate, and as a result, products that are not eaten must be discarded.

IELTS FORECAST
BY PHÁT DƯƠNG

To address this problem, definite actions need to be taken. To start with, governments should raise consumer's awareness on conscious consumption of food items. Citizens should be taught how not to overbuy and overconsume, and instead reuse leftovers or portion their meals accordingly. This could be aided by the use of educational television programs or community campaigns hosted by local authorities and institutions. Secondly, implementing a fine for households which discard food more than the average dumping rate. What the government can do is to introduce a reasonable quota of food waste that each individual can discharge and levy a tax on those who exceed their quota. The accumulated fine can be used to process garbage food.

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

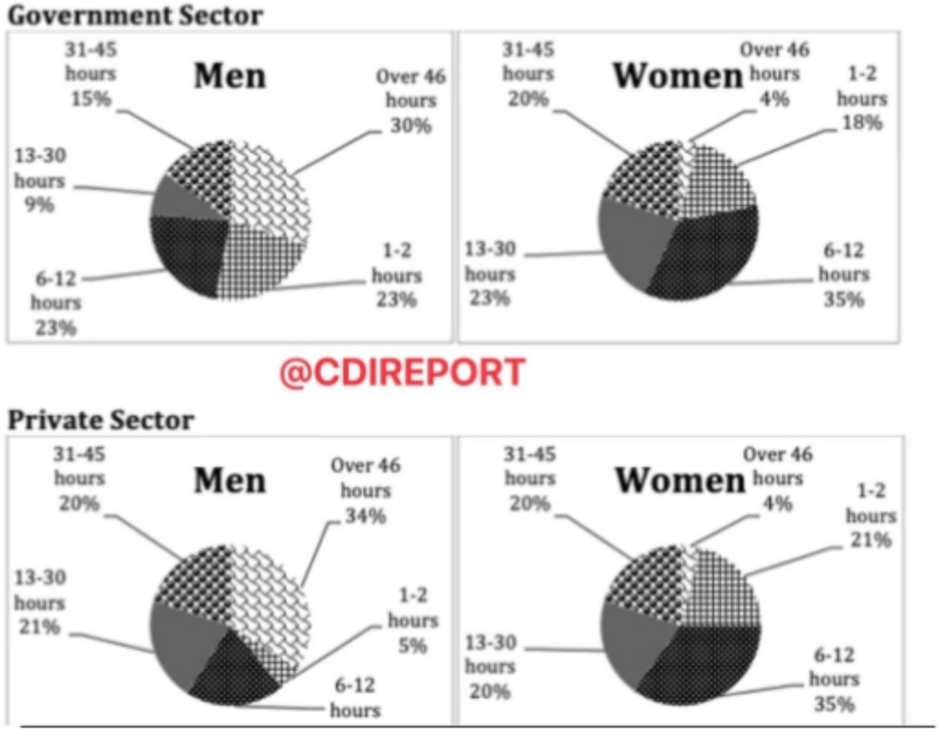
Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

In conclusion, while there are several reasons behind the waste of food, namely consumer depreciation and food surplus, this problem can be alleviated by applying suitable measures like enhancing conscious food consumption awareness and imposing fines on heavy dumpers.

Task 1: The graph below shows the weekly working hours for men and women in government institutions and private institutions.



Sample: The pie charts illustrate the amount of time men and women work each week in both private and governmental organizations.

Overall, men tend to work more hours than women in both sectors. While the distribution of women's working hours is fairly consistent across both sectors, a greater percentage of men work longer hours in the private sector.

For men, the percentage of those working more than 30 hours a week is higher in the private sector. Specifically, 20% of men in the private sector work 31-45 hours weekly, while 34% work over 46 hours, which is 5% and 4% higher, respectively, than their counterparts in government organizations. It is also noteworthy that only 5% of men in private organizations work 1-2 hours a week, compared to a significantly higher 23% in governmental organizations. Additionally, 9%

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Mọi tài liệu được share dưới dạng PDF hoặc từ tài khoản khác sẽ không đủ đề và không chịu sự kiểm soát từ thầy.

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

of male workers in the governmental sector work 13-30 hours a week, whereas 21% of men in the private sector do the same. In contrast, the proportions of men working 6-12 hours a week are more evenly distributed between the two sectors, with 20% in the private sector and 23% in the governmental sector.

In terms of women, the amount of time spent at work each week is quite similar across both sectors. Specifically, in both sectors, the percentage of female employees working over 46 hours, 31-45 hours, and 6-12 hours a week is 4%, 20%, and 35%, respectively. The proportion of women working 1-2 hours weekly in the private sector is 21%, which is 3% higher than the percentage in the governmental sector. For the 13-30 hours a week category, 20% of women in the private sector and 23% in the governmental sector work within that timeframe.

Task 2: An increasing number of people are choosing to have cosmetic surgery in order to improve their appearance. Why do people have operations to change the way they look? Do you think this is a positive or negative development?

Sample: An increasing number of people are turning to cosmetic surgery in an attempt to improve their appearance. This trend can be explained by several social and psychological factors, but I believe it represents a largely negative development overall.

One major reason why people choose to undergo cosmetic procedures is the growing pressure created by modern society. Social media platforms constantly promote idealised beauty standards, making individuals more aware of their perceived physical flaws. As a result, many people come to believe that looking younger or more attractive will bring them greater social acceptance or professional opportunities. In addition, cosmetic surgery has become more accessible than in the past, with lower costs and widespread advertising presenting it as a quick and simple solution to personal insecurities.

Despite these reasons, I would argue that the increasing popularity of cosmetic surgery is a negative development. While such procedures may offer short-term satisfaction, they often fail to address deeper issues related to self-esteem. In many cases, individuals become dependent on repeated surgeries in pursuit of unrealistic beauty standards, which can harm both their mental and physical health. On a broader level, this trend reinforces the idea that appearance determines

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

personal worth, discouraging self-acceptance and increasing anxiety, particularly among younger generations. Compared to investing in psychological well-being and confidence, cosmetic surgery provides only superficial benefits.

In conclusion, although cosmetic surgery is becoming more common due to social pressure and easier access, I believe this trend has harmful consequences for individuals and society as a whole, making it a negative development.

Task 1: The table below shows the top five methods experts and the general public believe will help reduce global warming.

Experts	The General Public
Use Cleaner Energy	Choose Cars that Use Less Petrol
Grow More Trees	Make Homes Leak Less Air
Capture and Store Carbon	Use Cleaner Energy
Help the Oceans Grow More Algae	Eat Less Meat
Reflect Sunlight Away from Earth	Turn Off Electronics When Not in Use

Sample: The table compares the five methods that climate experts and members of the general public believe are the most effective in reducing global warming. It highlights the different priorities of these two groups when selecting solutions to tackle climate change.

Overall, both experts and the general public consider using cleaner energy to be an effective way of addressing global warming, making it the only measure that appears in both lists. However, experts mainly favour large-scale scientific and environmental solutions, whereas the general public tends to support practical actions that individuals can take in their daily lives.

According to the table, experts believe that using cleaner energy is the most effective method. They also recommend planting more trees, capturing and storing carbon, encouraging the growth of ocean algae, and reflecting sunlight away from the Earth. These measures generally require

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

scientific research, technological development, or government involvement rather than individual effort.

By contrast, the general public focuses on lifestyle changes. Their preferred methods include choosing cars that use less petrol, making homes more energy-efficient by reducing air leakage, eating less meat, and turning off electronic devices when they are not in use. Unlike the experts' suggestions, these actions can be adopted by ordinary people with relatively little difficulty.

Task 2: It is more important for schoolchildren to learn about local history than world history. To what extent do you agree or disagree?

Sample: In recent years, there has been ongoing debate about whether schoolchildren should prioritize learning local history over world history. While some people believe that local history is more important, I strongly disagree and argue that both should be taught in parallel.

On the one hand, proponents of local history argue that it plays a vital role in shaping students' identity. Firstly, learning about local historical values helps children understand their cultural roots and traditions. This knowledge is essential for building a sense of belonging and national pride. Secondly, local history was more relevant in the past when societies were less interconnected. In earlier times, most people lived and worked within their own communities, so understanding local history was sufficient for daily life and social interactions.

On the other hand, I believe that prioritizing local history alone is outdated in today's globalized world. Firstly, international knowledge is crucial due to increasing globalization and migration. People now frequently interact with individuals from different cultural and national backgrounds, so understanding world history helps them communicate and cooperate more effectively. Secondly, world history provides a broader context for understanding local events. For example, many national historical milestones are closely linked to global events, and without this wider perspective, students may fail to fully grasp their significance.

In conclusion, although local history remains important for cultural identity, it should not be considered more important than world history. Instead, both should be taught together to ensure that students develop a comprehensive and well-rounded understanding of the past.

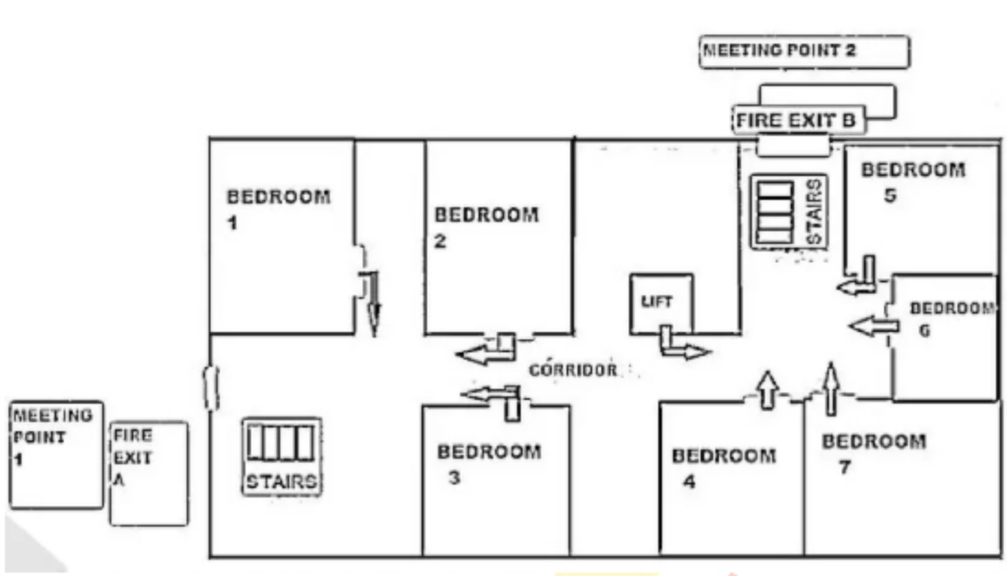
Task 1: The diagram below shows the layout of part of a building, indicating the position of fire exits.



Sample: The diagram illustrates the layout of part of a building, highlighting the positions of fire exits and external meeting points.

Overall, the floor contains seven bedrooms connected by a central corridor, with two exits positioned at either end. Each of these leads to a designated meeting point, and the arrangement ensures that all rooms have direct access to evacuation routes in the event of a fire.

Looking first at the left-hand side, Bedrooms 1, 2, and 3 are located close to Fire Exit A. This exit, which is directly linked to a staircase, provides access to Meeting Point 1 situated outside the building. As the arrows show, all occupants on this side are guided towards this exit.

Turning to the right-hand side, Bedrooms 4 to 7 are directed towards Fire Exit B. Positioned next to both a staircase and the lift, this exit opens onto Meeting Point 2. While Bedrooms 5 and 6 lie in close proximity to it, Bedrooms 4 and 7, although placed nearer the centre of the corridor, are also instructed to use this route.

Task 2: In some parts of the world, traditional food is gradually being replaced by fast food, and this trend is having a negative effect on families and society. To what extent do you agree or disagree with this belief?

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Sample: In many countries, traditional dishes are gradually being replaced by fast food as people's lifestyles become increasingly busy. This leads to the belief that this change has harmful consequences for both families and society. I completely agree with this view because this tendency can weaken family relationships and contribute to long-term health and cultural problems.

One of the most significant drawbacks of replacing traditional food with fast food is its effect on family life. Preparing traditional meals often requires planning, cooperation and time, making cooking and eating together an important opportunity for family members to interact. During these shared meals, parents and children naturally discuss their daily experiences, which strengthen emotional bonds and pass on family traditions. By contrast, fast food is designed for speed and convenience. Instead of sitting down for a home-cooked dinner, family members may simply purchase takeaway meals and eat separately whenever it suits their schedules. While this may save time in the short term, it gradually reduces meaningful face-to-face communication. As a result, family members can become emotionally distant despite living under the same roof.

Beyond its impact on families, this dietary shift also creates broader social challenges. From a public health perspective, many fast-food meals contain excessive amounts of salt, sugar, and saturated fat while offering relatively little nutritional value. As these meals become a regular part of people's diets, health problems such as obesity, diabetes and cardiovascular disease are more likely to rise, placing huge pressure on healthcare systems. Equally concerned is the gradual erosion of culinary heritage. Traditional recipes often reflect a country's history, local ingredients and cultural identity, and they are typically passed down from one generation to the next through home cooking. If younger people become accustomed to eating at international fast-food chains instead of learning these recipes, many local dishes may eventually disappear. This would represent not only a loss of gastronomic diversity but also a weakening of cultural identity.

In conclusion, although fast food serves a practical purpose in today's fast-paced society, I believe its growing dominance over traditional cuisine is, on balance, a negative development.

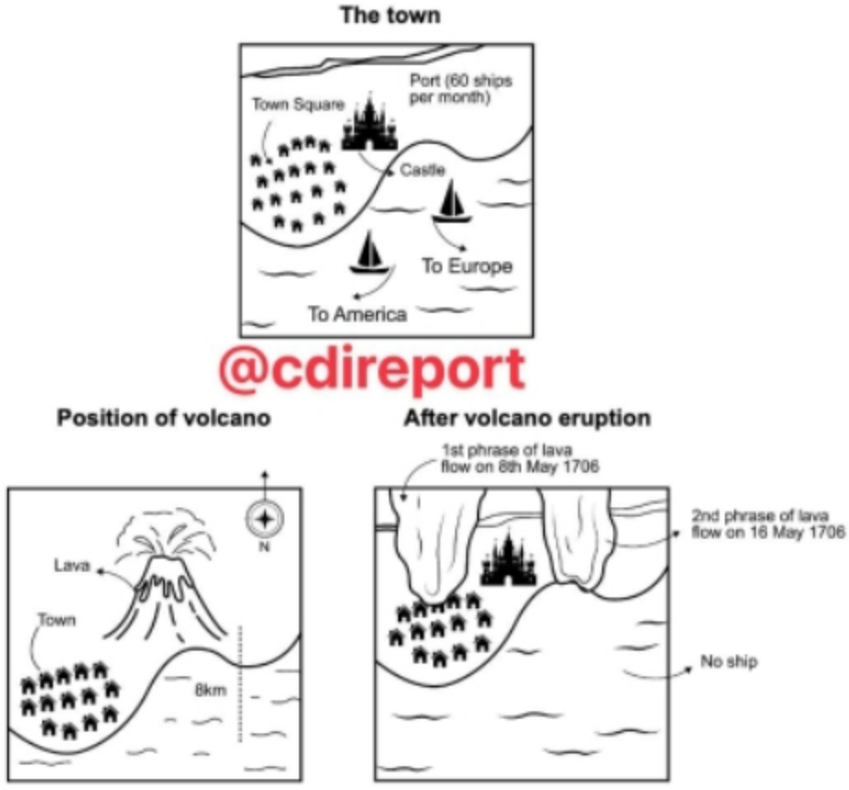
The convenience it offers is ultimately outweighed by its harmful effects on family relationships, public health, and the preservation of cultural heritage.

Task 1: The maps below describe a town in the Atlantic Ocean affected by a volcanic eruption in 1706.



Sample: The three maps show the main changes that took place in a town in the Atlantic Ocean after a volcanic eruption in 1706.

Overall, what stands out from the maps is that the town was located about 8 km away from the volcano in the south-western part of the map. Following the eruption, lava flowed towards the town in two phases destroying the infrastructure of the town. In addition, the port was no longer accessible to ships.

Looking at the details before the eruption, in the western part of the town, there was a large number of residential areas. In the Northern part of the town , there was a port and castle. The

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

port was one of the most important buildings in the town, from which 60 ships sailed to Europe and America.

The volcano was situated approximately 8 km east of the town. On 8 May 1706, the first phase of the eruption occurred, with lava flowing northwards and towards the city and reaching the residential areas. Following that, the second phase of the eruption occurred on 16 May 1706, destroying the port and reaching the castle in the northern part of the town. This means that the sea transport system was completely destroyed. Despite the two-phase eruption, some residential buildings and the castle remained visible on the map.

Task 2: In many parts of the world, people now often throw things away when they are broken and buy new ones, whereas in the past, broken things were repaired and used again. Why do you think this is the case? What problems may it lead to?

Sample: The widespread habit of discarding broken items and purchasing replacements instead of repairing them has become increasingly common in many societies. This essay will discuss the main reasons behind this shift before examining the potential problems caused by this trend.

There are several factors contributing to the rise of this throwaway culture. Chief among these is the development of affordable mass production. As manufacturers are able to reduce production costs through large-scale manufacturing, many consumer goods have become relatively inexpensive. As a result, people often find it more economical and convenient to buy new products rather than spend money on repairing damaged ones. For example, when household appliances such as microwaves or washing machines break down, consumers may prefer purchasing newer models instead of paying for costly repair services. Another reason worth mentioning is the influence of consumerism and the desire for convenience. Through advertising campaigns, companies frequently encourage people to upgrade their possessions by associating newer products with higher quality, modern lifestyles, and social status. Consequently, many individuals replace electronic devices that are still functional simply because they are considered outdated.

Nevertheless, this trend can lead to several serious consequences. Perhaps the most concerning issue is environmental degradation. When increasing numbers of products are thrown away, the

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Mọi tài liệu được share dưới dạng PDF hoặc từ tài khoản khác sẽ không đủ đề và không chịu sự kiểm soát từ thầy.

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

amount of waste sent to landfills also rises, which contributes to pollution and places additional pressure on natural resources. This problem is particularly evident with discarded electronics and plastic-based appliances, as these materials are often difficult to recycle completely. Another negative impact is the decline of repair skills and local repair businesses. As fewer people choose to fix their belongings, the demand for repair services decreases, causing traditional skills and small repair shops to gradually disappear. For instance, neighbourhood watchmakers and appliance repair stores may struggle to survive when customers increasingly favour replacing old items.

In conclusion, the preference for replacing rather than repairing products is mainly driven by affordable manufacturing and consumerist attitudes. However, this development may result in environmental harm and the loss of valuable repair expertise and local businesses.

Task 1: The table and chart provide a breakdown of the total expenditure and the average amount of money spent by students per week while studying abroad in four countries.

Expenditure of studying abroad	
Country	US($)
A	875
B	735
C	540
D	435

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

Sample: The table and bar chart illustrate the total expenditure and the average weekly spending on accommodation, tuition, and living costs by international students in four countries.

Overall, country A had the highest total cost, while country D was the most affordable. In all four countries, living costs made up the largest portion of student expenses—except in country D. Besides, accommodation consistently represented the lowest expense category.

In terms of total spending, students in country A incurred the greatest cost at $875 per week, followed by country B at $735. Country C's figure was notably lower at $540, while country D was the most economical, with students spending $435 weekly.

Looking at the breakdown of weekly expenses, living costs topped the list in most countries, peaking at $430 in country A. This was followed by $350 in country B, $275 in country C, and $225 in country D. Tuition fees were the second largest expenditure in all cases, ranging from $358 in country A to $235 in country D. Accommodation expenses were consistently the lowest, though country B had the highest figure in this category at $280, followed by $240 in country C, $220 in country A, and $200 in country D.

Task 2: Some people think that climate change could have a negative effect on business. Other people think that climate change could create more business opportunities. Discuss both views and give your own opinion.

Sample: While some people tend towards the viewpoint that climate change might be detrimental to business, I would have to support the idea that this shift could generate more opportunities for development and innovation.

HELLO FORECAST
BY PHÁT DƯƠNG

On the one hand, there are clear arguments that climate change can adversely affect businesses. One of the main reasons can be that the extreme weather conditions becoming more frequent and severe because of global warming can damage businesses' finances and reduce productivity. For example, companies might have to fix destroyed buildings and facilities caused by a storm, which can be extremely costly and cease operations. Another reason is that companies might have to adjust the way their business is run to follow newly established environmental laws, which can also require a significant amount of money. For instance, manufacturing firms may

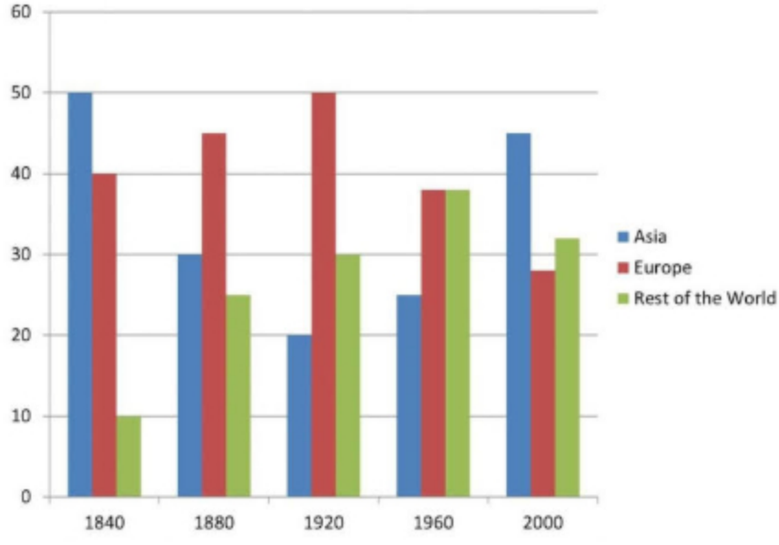
TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG
Mọi tài liệu được share dưới dạng PDF hoặc từ tài khoản khác sẽ không đủ đề và không chịu sự kiểm soát từ thầy.
Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

need to invest in new technologies and equipment that uses less energy, substantially increasing their operating costs.

On the other hand, I agree with the viewpoint that climate change can lead to opportunities for business. Firstly, I believe that global warming could be the driving force behind companies' innovation and technological advancement. People are becoming environmentally conscious, motivating companies to develop eco-friendly products and services to meet the demand. To illustrate, many firms are producing solar panels, wind turbines and electric vehicles as more people switch to renewable energy. Secondly, climate change can open new markets and sources of revenue. Businesses that adapt quickly to changing consumer preferences and environmental concerns are likely to gain a competitive advantage and attract more customers.

In conclusion, it seems to me that although climate change presents significant challenges and costs for many businesses, its potential to drive innovation, create new industries, and stimulate economic growth makes it a largely positive development for the business sector.

Task 1: The bar chart below shows the percentage of share of total world production by Asia, Europe and other parts of the world from the years 1840 to 2000.



Sample: The line graph presents data on the global manufacturing output from 1840 to 2000, comparing three regions: Asia, Europe, and other parts of the world.

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Mọi tài liệu được share dưới dạng PDF hoặc từ tài khoản khác sẽ không đủ đề và không chịu sự kiểm soát từ thầy.

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

Overall, Asia remained the leading contributor to global manufacturing despite a noticeable decline in its share. While both Asia and Europe experienced a downward trend over time, other regions saw significant growth, especially towards the end of the period.

In the earlier years, Asia accounted for the largest proportion of global manufacturing, although its share declined gradually from around 50% in 1840 to roughly 40% by 2000. Europe, meanwhile, witnessed a steady increase in its production share in the first half of the timeline, peaking before starting a gradual decline that brought it down to approximately 30% at the end of the period.

In contrast, other parts of the world, which initially contributed the least, experienced substantial growth. Their share of global production tripled, surpassing Europe towards the end of the 20th century and reaching over 30% by 2000. This upward trajectory marked a clear shift in the global manufacturing landscape.

Task 2: Some people say it is the government's responsibility to transport children to school, while others believe parents should transport their children to school. Discuss both views and give your opinion.

Sample: The responsibility for transporting children to school, whether it rests with individual families or the state, is a subject of considerable societal discussion. While the benefits of parental involvement in this daily routine are notable, I contend that government-provided transport is still essential.

Many advocate that parents should retain the primary charge of escorting their children to school. This perspective is rooted in the belief that personally managing school transport keeps parents more intrinsically involved in their children's daily routines. Consequently, this closer supervision is thought to enhance safety awareness and strengthen emotional bonding within the family unit. Furthermore, parental transport affords greater flexibility and independence from public systems. This is because parents can select convenient travel times and routes, adapting to their own work schedules or unexpected changes. In suburban areas, for example, where schools may be nearby, families using private cars or bicycles can adjust departure times to avoid heavy traffic, thus preventing lateness without depending on fixed public bus timetables.

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

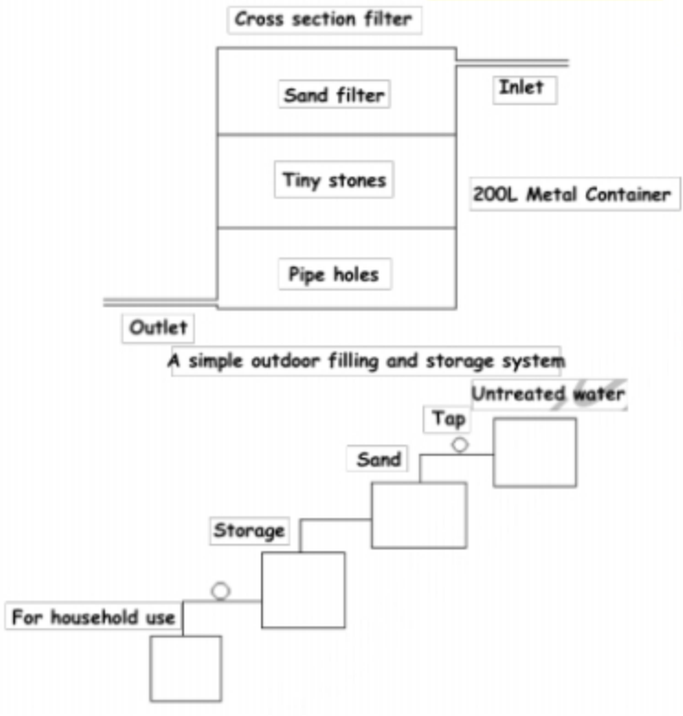
Mọi tài liệu được share dưới dạng PDF hoặc từ tài khoản khác sẽ không đủ đề và không chịu sự kiểm soát từ thầy.

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

Conversely, I am highly convinced that school transport provided by the government is integral to ensuring equality and safety for all students. Regarding the former, publicly funded transport ensures that children from remote or low-income areas can attend school regularly. As a result, this intervention directly reduces absenteeism and mitigates educational inequality. Finland, for instance, provides free school buses serving rural regions, ensuring students who live far from schools arrive safely and punctually, thereby guaranteeing equal access regardless of geography. Another notable benefit is that this policy enhances public safety and environmental efficiency. This stems from the fact that organized school buses significantly reduce traffic congestion around educational institutions and lower accident risks, which leads to safer streets and a corresponding decrease in carbon emissions.

In conclusion, although direct parental responsibility for school transport offers benefits in flexibility and family involvement, I would maintain that the provision of a state-funded system is a superior approach. It is crucial for upholding educational equity and ensuring the collective safety and environmental well-being of the community.

Task 1: The following are two filter systems.



TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Mọi tài liệu được share dưới dạng PDF hoặc từ tài khoản khác sẽ không đủ đề và không chịu sự kiểm soát từ thầy.

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

Sample: The diagrams showcase two types of water filtration systems.

As shown, the outdoor filling and storage system requires more steps in order to purify water when compared to the cross section filter.

The cross section filter contains three different compartments enclosed within a 200L Metal container. Untreated water is passed through the inlet, where the first filter made of sand removes any large impurities. Then, water is further treated by tiny stones, which eliminates finer unwanted particles. Lastly, the filtered water flows through the pipe holes and out to the outlet on the other side, ready for consumption.

On the other hand, the second water filter contains four separate sections. Untreated water is first placed within a tank that can be funneled out via a tube, with a tap controlling the water flow. In the second compartment is sand where, like the previous filter, large impurities are removed. Following this, treated water is passed into a tank for storage; when the water is needed for household use, another tap can be used to direct water into a separate vessel.

Task 2: In some countries, it is illegal for companies to reject job applicants for their age. Is this a positive or negative development?

Sample: As human beings are moving towards a world of equality and fairness, age discrimination in the workplace has been commonly prohibited in many countries. In my opinion, I am strongly in agreement with this legal policy for its impacts on both individuals and other related organisations on a larger scale.

In terms of employees in the job market, they would benefit from this practice financially and mentally. Firstly, when candidates cannot be denied based on their age, people in any life stage can look for employment, make ends meet and advance their careers for not only financial independence but also self-validation. For instance, senior citizens may still hold a position and earn money to aid themselves without relying on their children or welfare systems. In other words, if ageism were allowed to be rampant at work, it could jeopardise one's career progression and financial status, especially when one is laid off due to how old they are. More importantly, the reluctance of prospective employers to recruit exceptionally young or old workers may possibly create a toxic work environment, which can lead to stress for employees.

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

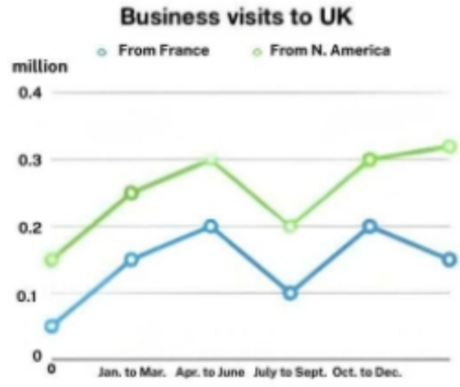
Mọi tài liệu được share dưới dạng PDF hoặc từ tài khoản khác sẽ không đủ đề và không chịu sự kiểm soát từ thầy.

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

Notwithstanding the aforementioned arguments, fruitful effects of this policy extend beyond those who experience ageism first-hand. By abiding by the law to abandon age discrimination, companies may take advantage of a larger pool of candidates in order to find the most suitable ones for their businesses. To be more specific, when age is not a deciding factor to indicate the level of competency of employees, organisations can benefit from both the experience, work ethic and honed skills of senior workers as well as the youthfulness, energy and creativity of youngsters. That diversity can act as a precursor to not only a friendly work environment with lower employee turnover rates and higher productivity but also a thriving future and prosperity for employers.

In conclusion, I would reiterate that the practice of removing ageism from the recruitment process is highly likely conducive to various economic and societal benefits for both individual job applicants and related organisations.

Task 1: The graph gives information about the number of yearly visits from France and North America for holiday and business.



TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Mọi tài liệu được share dưới dạng PDF hoặc từ tài khoản khác sẽ không đủ đề và không chịu sự kiểm soát từ thầy.

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

Sample: The line charts illustrate the visits to the United Kingdom from North America and France for business and holiday purposes across four periods of the year.

Overall, holiday travel far exceeds business travel for both regions, peaking in mid-summer. In business travel, North America consistently records higher figures than France in every period.

For holiday purposes, visits from North America show a much sharper rise and fall than those from France. At the beginning, France recorded around 0.9 million visits, slightly higher than the 0.75 million from North America, but they soon equalized at around 1 million by the end of the January to March period. Afterwards, North American visits dramatically increase to a peak of 3 million in mid-summer, while those from France rise more gradually to about 1.5 million. Both figures then fall back to their initial levels by October to December.

By comparison, business trips are much lower overall. North America consistently records higher numbers, starting at around 0.15 million in January to March and increasing to 0.3 million in April to June before dipping markedly to 0.2 million in July to September and reaching the highest level of approximately 0.33 million at the end of the year. France follows the same pattern at lower levels, beginning at 0.05 million and growing to 0.2 million in April to June, then decreasing to 0.1 million and ending at about 0.15 million.

Task 2: People who go to live in other countries, should follow the customs and traditions of the new country. To what extent do you agree or disagree?

Sample: It is proposed that newcomers to a country should be accustomed to the local practices and conventions. While I acknowledge the reason for this thinking, I would argue that people should embrace the host country's customs for harmonious coexistence overseas while maintaining national identity.

On the one hand, understanding and following the customs of a new country is essential for social integration. Since each country is characterized by a different set of lifestyles and social norms, the ignorance of these would subject a person to unnecessary misunderstandings, which might hinder their social interactions or even escalate into conflicts. For example, in the US, tipping is established as a social norm rather than a personal decision. Immigrants who forgot to tip after leaving local restaurants could be viewed as impolite and discourteous despite the

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Mọi tài liệu được share dưới dạng PDF hoặc từ tài khoản khác sẽ không đủ đề và không chịu sự kiểm soát từ thầy.

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

absence of malicious intent. Considering these reasons, the belief that following the local customs seems perfectly justifiable.

However, people should not abandon their own traditions and identity. This is because a national quintessence and a person's identity are shaped by traditions, such as food, festivals, language, and religion. If these personal traditions do not violate any laws or cause any inconveniences for living overseas, they should be respected, as full assimilation would inadvertently lead to cultural loss and social resentment. For example, Hindu religious traditions such as not eating pork are now widely recognized and respected among many host societies. Many restaurants and major airlines around the globe have dedicated an exclusive dietary option to cater for these special customer segments, since failing to embrace traditional discrepancies would kindle social resentment, placing predicaments on businesses. All these considered, host societies should be open to cultural differences with reasonable considerations.

In conclusion, while there are justifications that people residing in a new country should follow the local customs for harmonious social integration, this is by no means abandoning people's traditions which have shaped their national identity. Thus, immigrants should be open to social norms and cultural differences within reasonable limits.

Task 1: The charts below show the figure for hours per week in the industrial sector in four European countries in 2002.

IELTS FORECAST
BY PHAT DUONG

TÀI LIỆU FORECAST WRITING-SPEAKING QUÝ 3/2026 ĐỘC QUYỀN BY PHÁT DƯƠNG

Sample: The charts illustrate the weekly working hours of employees in the industrial sector across four European countries—France, Denmark, Sweden, and the UK—in 2002.

Overall, the majority of workers in all countries were concentrated in the 36–40 hour range. While short working hours (1–14) were uncommon, long hours (over 50) were notably more prevalent in the UK and Sweden than in France and Denmark.

In France, just under 40% of workers fell into the 36–40 hour bracket, while slightly more than 40% worked 31–35 hours weekly. Around 20% worked between 46 and 50 hours, and the remaining categories each accounted for roughly 10%. Denmark displayed a more uniform trend, with 70% of workers working 36–40 hours, followed by 25% in the 31–35 range. The other groups were minimal, each contributing less than 10%.

Sweden showed the highest concentration in the 36–40 hour category at 80%. Additionally, about 35% worked 31–35 hours and 30% fell into the 41–45 hour bracket, with other categories making up 20% or less. In contrast, the UK showed more variation: 50% worked 36–40 hours, while around 20% worked both 46–50 and over 50 hours per week. Approximately 15% worked 41–45 hours, and the rest comprised less than 10% each.

Để nhận tài liệu đầy đủ, vui lòng liên hệ zalo 0963595059

Task 2: University students always focus on one specialist subject, but some people think universities should encourage their students to study a range of subjects in addition to their own subject. To what extent do you agree or disagree?

Sample: University students often concentrate solely on their specialist subject, but some argue that they should be encouraged to study a wider range of subjects. I partially agree with this view. While focusing on one's major field of study is crucial for professional development, learning additional subjects can provide significant advantages.

On the one hand, concentrating on a single specialist subject allows students to gain in-depth knowledge and expertise, which are essential for success in their careers. For instance, in fields such as medicine, engineering, or technology, deep and focused study is required to master the necessary skills and knowledge. Medical students, for example, spend years studying their core subjects to ensure they can provide high-quality healthcare services. Furthermore, focusing exclusively on a major field helps students allocate their time and resources effectively, ensuring a higher level of competency in their chosen profession.

On the other hand, studying a variety of subjects can offer students broader perspectives and equip them with essential skills for modern life. Courses in management, psychology, or communication can enhance students' interpersonal skills, teamwork abilities, and critical thinking. Moreover, a diverse knowledge base allows students to adapt to the ever-changing job market. For instance, an engineer with business knowledge may excel in management roles or successfully launch their own startup. Thus, exposure to multiple disciplines not only enriches a student's educational experience but also prepares them for a more versatile career path.

In conclusion, while specializing in a single subject is vital for achieving professional success, incorporating additional subjects can provide students with a well-rounded education and the flexibility to navigate a dynamic job market. Universities should strive to balance these two approaches, ensuring students benefit from both focused expertise and a diverse skill set.
